# SCHEEFFER'S RECORDING WATT-METER.

For Alternating Circuits. No Commutator. No Brushes.

Registers Direct Actual Power Consumed.

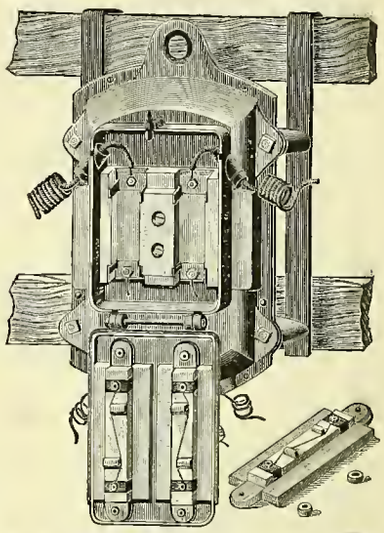
EASILY ADJUSTED. ABSOLUTELY RELIABLE.

# DIAMOND TRANSFORMER.

Simplest, Safest and Best.

FOR ANY VOLTAGE. FOR ALL SYSTEMS.

## DIAMOND ELECTRIC CO., Peoria, Ill.



# SAWYER-MAN INCANDESCENT LAMPS,

## With Bases to Fit Any Socket.

We have now resumed the manufacture of the well-known Sawyer-Man Lamps, on a scale to meet any possible demand.

We have adopted new methods of manufacture which add to the appearance and quality of our lamps, and make them by reason of their efficiency and long life, the cheapest and best lamps ever offered.

PRICES:

**PLAIN LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 25 cents each. |
| 20 and 25 candle power lamps | 30 " |
| 32 candle power lamps | 38 " |
| 16 candle power street car lamps | 25 " |
| 16 candle power street car lamps, anchored | 32 " |

**ORNAMENTAL LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 30 cents each. |
| 20 and 25 candle power lamps | 35 " |

Discounts according to quantity.

For etching the plain or ornamental lamps, 3½ cents each, net.

**COLORED LAMPS.**

"Dipped" lamps in red, blue or green, 5 cents each, net, additional.

Lamps with bases to fit Thomson-Houston sockets, 3 cents extra.

Boxing and packing at cost.

Prices are subject to change without notice.

# Westinghouse Electric & Manufacturing Company,

PITTSBURG, PA.

**Branch Offices in all Leading Cities.**

# WESTINGHOUSE ELECTRIC & MANUFACTURING CO.,

**PITTSBURGH, PA.**

We manufacture Complete Installations of

# ELECTRICAL APPARATUS

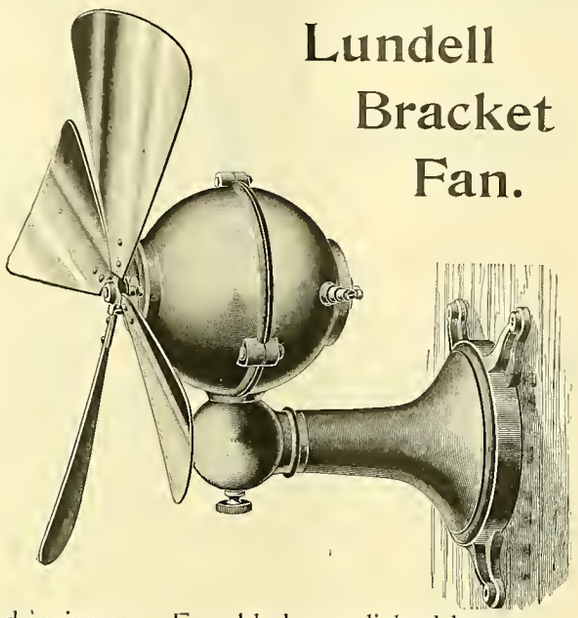
For **CENTRAL STATION ELECTRIC LIGHTING, LONG DISTANCE TRANSMISSION OF POWER, ELECTRIC RAILWAY AND ISOLATED PLANTS.**

**BRANCH OFFICES IN ALL LARGE CITIES.**

## Suit the action to the thought

and turn your thoughts in the direction of **Lundell Motors.** No other make of Fans will bring greater reward in

**customers—satisfaction—cash.**



**Lundell Bracket Fan.**

The type of Bracket Fan Motor illustrated is one that will find ready sale with a large class of trade—restaurants, hotels, clubs, billiard parlors, etc. No necessity for a jack-carpenter, fastens directly against the wall. Has a ball-joint, allowing adjustment of fan in any direction. Regulating switch giving 3 speeds. Body finished in japan. Fan blades polished brass. Furnished with guards when desired.

For constant potential incandescent circuits up to 115 volts.

**Don't let the season get ahead of you. We are ready.**

CHICAGO FACTORIES, WESTERN ELECTRIC CO.

# CIRCULAR LOOM CONDUIT.

## FLEXIBLE . . . CONDUIT . . . .

The present stiff tubes furnished for this purpose have long been found imperfect and unsatisfactory to the electrical engineer and constructor. The ***rigidity*** of the tube makes it an impossibility to install in buildings already constructed, without cutting the surface of the wall or ceiling; and the ***numerous*** joints and elbows make the drawing in of wires very difficult.

In any system of interior tubing, the first cost of the tube is in a measure immaterial; but the cost of the connections and elbows and the cost of labor in applying same, is the most important factor. There is also an equity to be figured in the ***waste*** of ***short*** and ***damaged*** lengths, which are practically worthless.

The ***Flexible Conduit*** recommends itself, because:—

1. It is thoroughly flexible.
2. It is thoroughly waterproof.
3. It requires no joints or elbows.
4. It will not readily ignite.
5. Wires will not stick in it.
6. It can be furnished in any length.

While the first cost of our tubing may seem high, we would suggest that consumers figure the cost of a ***short, stiff tube,*** the cost of ***joint sleeves,*** the cost of the ***elbows,*** the cost of the ***labor*** in applying same, and the probable ***waste*** in odd and damaged lengths; and net cost will show the economy of Flexible Conduit.

## IRON ARMORED CONDUIT . . . . . .

*Iron Armored* Circular Loom Conduit will be ready for delivery *May first,* and orders are now being entered for shipment on that date.

As is the case with the *flexible* conduit, experiment shows that the *Armored* Conduit will be the *most economical* and *satisfactory* conduit on the market.

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructione in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.
Colored Glass Insulators to designate different currents.

**WORK ON SPECIAL DESIGNS A FEATURE.**
Send Model or Drawing and we will furnish estimates.

**HEMINGRAY GLASS CO.,**
Office, Covington, Ky. —ESTABLISHED 1848.— Factories, Muncie, Ind.

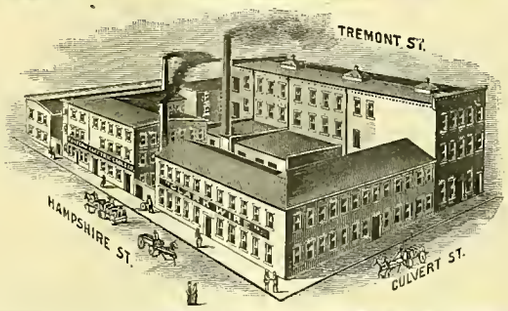
## THE "CLARK" WIRE.

TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**
**1649, 1650, 1651 MONADNOCK BLDG.,**
**CHICAGO, ILLINOIS.**



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.
The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |

# Westinghouse Electric & Mfg. Co.,

Sole owners of the fundamental patents covering Polyphase Alternating Current Motors, issued by the United States Patent Office to ***Nikola Tesla.***

The system adopted by the Cataract Construction Company for their great plant at Niagara.

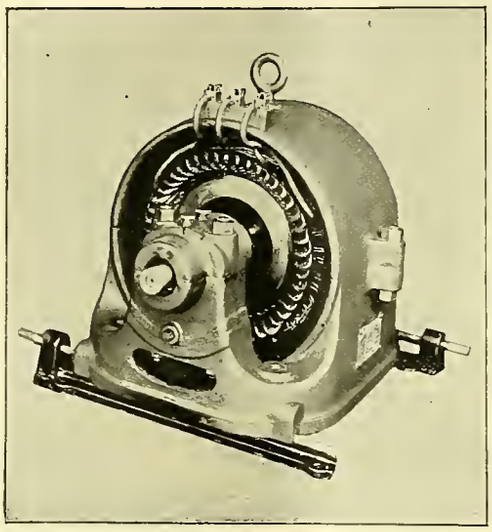
Especially adapted to transmission of power over great distances.

The ideal system for distribution of power in factories and mills.

All machinery in the New Works of the ***Westinghouse Electric & Manufacturing Company*** at East Pittsburg, Pa., is driven by Tesla Polyphase Motors, supplied from a central power plant.

***RESULTS:***--High Efficiency as compared with ordinary methods of shafting and belting: Convenience, Economy and Flexibility secured.

Inspection invited.



# NOTICE IS GIVEN

That induction motors operated by the so-called "Monocyclic" system offered for sale by the General Electric Company are in fact multiphase motors and are broadly covered by the patents of Nikola Tesla owned by the Westinghouse Electric & Manufacturing Company.

The motors and system of distribution advertised by the Stanley Electric Company of Pittsfield are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Company to bring suits against all users of apparatus infringing the Tesla patents, in order that the rights of the company may be enforced.

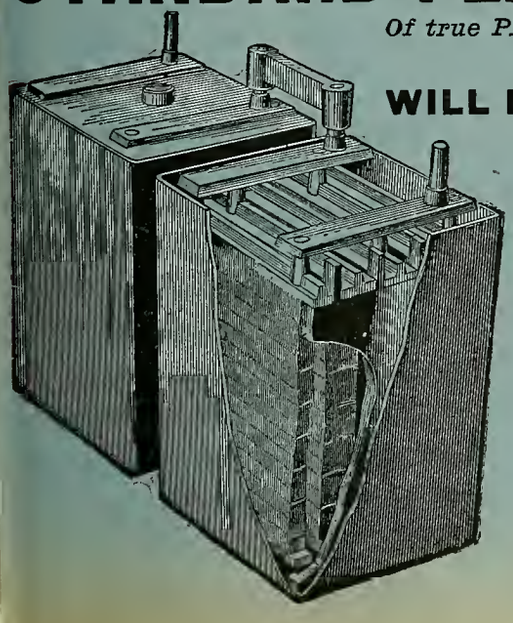
# STANDARD PLANTE STORAGE BATTERIES



*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.

**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

**CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

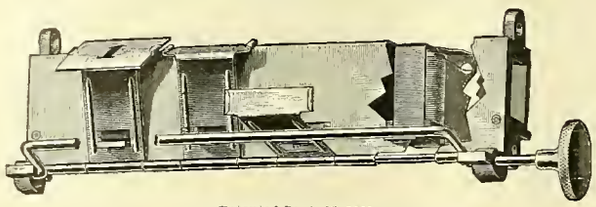
"C" STYLE.
Made in Sizes from 4 to 20 Drops.

# ANNUNCIATORS

That never fail to Annunciate.



Patented Sept. 27, 1892.

This illustrates the inside construction of our Gravity-Drop Annunciator as applied to the 4 Drop "Eclipse" Case.

No Springs. No Screws. Nothing to get out of adjustment. Simplicity itself.

*Our other Specialties:*

**REX** Wood-box Bells,
**ECLIPSE** Iron-box Bells,
**SPARK** Coils,
**WOOD** Push Buttons,
Floor Pushes,
Door Connections, etc., etc.

## PROCTOR-RAYMOND ELECTRIC CO.,

Rochester, N. Y.

# SAWYER-MAN INCANDESCENT LAMPS,

## With Bases to Fit Any Socket.

We have now resumed the manufacture of the well-known Sawyer-Man Lamps, on a scale to meet any possible demand.

We have adopted new methods of manufacture which add to the appearance and quality of our lamps, and make them by reason of their efficiency and long life, the cheapest and best lamps ever offered.

PRICES:

**PLAIN LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 25 cents each. |
| 20 and 25 candle power lamps | 30 " |
| 32 candle power lamps | 38 " |
| 16 candle power street car lamps | 25 " |
| 16 candle power street car lamps, anchored | 32 " |

**ORNAMENTAL LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 30 cents each. |
| 20 and 25 candle power lamps | 35 " |

Discounts according to quantity.
For etching the plain or ornamental lamps, 3½ cents each, net.

**COLORED LAMPS.**

"Dipped" lamps in red, blue or green, 5 cents each, net, additional.

Lamps with bases to fit Thomson-Houston sockets, 3 cents extra.
Boxing and packing at cost.
Prices are subject to change without notice.

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

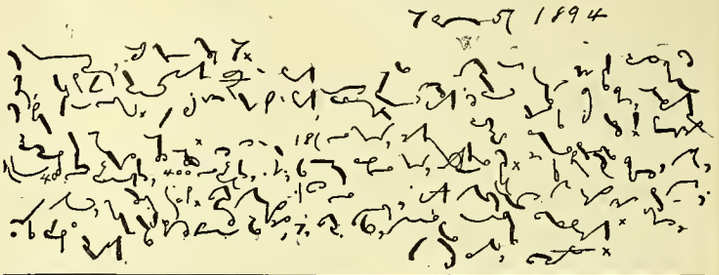
**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality Our course is graded and arranged in logical order. We claim not a new system but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

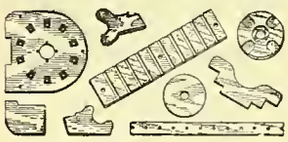
The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work The art is made a specialty.

Tuition, $10.00 per month Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.



# VULCABESTON



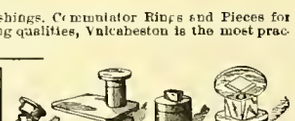
## CONTROLLER PARTS.

**We will furnish these for the Westinghouse and General Electric Companies' Controllers.**

Also Vulcabeston Field Magnet Spools Brushholder Bushings, Commutator Rings and Pieces for Special Purposes. Owing to its toughness and heat-resisting qualities, Vulcabeston is the most practical material for the above and similar purposes.

## Trolley Line Materials,

**Insulated with Moulded Mica, acknowledged to be the most durable and the best for practical service.**



Brushholder Bushings and Field Spools for the old Edison or Sprague Nos. 6, 8 and 14 Motors.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.
Colored Glass Insulators to designate different currents.

**WORK ON SPECIAL DESIGNS A FEATURE.**

## THE "CLARK" WIRE.

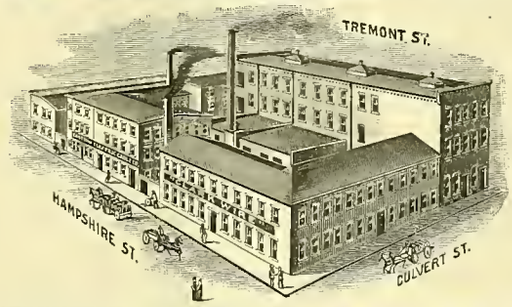
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

**NOTICE.**

*To Steam Users, and others interested in the manufacture, purchase, or use of, and sale, of Steam Boilers.*

Having been granted Letters Patent on a "Safety Water Tube Boiler," of the "type" and "class" in which the Steam and Water drums are arranged and located transversely to the flow of products of combustion in their travel from the furnace to out-take to stack, of which the "Stirling" and "Pierepoint" are examples. My patents covering, in a fundamental degree, devices and arrangements, for the maintenance of continuous circulation throughout the entire boiler system, and, it having become known to me that certain parties are offering for sale boilers of this class, for which boilers they claim such continuous circulation, it is, therefore, necessary for me to notify manufacturers, users, buyers and sellers, and those who may be acting as agents for the sale of such boilers, that the same are a direct infringement of my patents, which it is my purpose to protect to the utmost extent, at the same time to guarantee to all purchasers of my Boilers the fullest protection against claims or litigation on the part of any and all patentees of Water Tube Boilers.

L. M. MOYES,
[Late Manager Babcock & Wilcox Co.]
PATENTEE AND MANUFACTURER
Combine Safety Water Tube Boiler,
411-413 WALNUT ST., PHILADELPHIA.

**WANTED.**

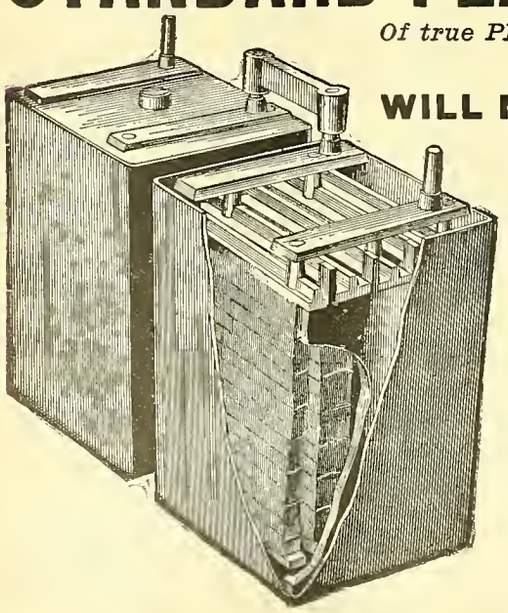
# STANDARD PLANTE STORAGE BATTERIES

*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.



**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

☞ **CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

# CIRCULAR LOOM CONDUIT.

## FLEXIBLE . . . CONDUIT . . . .

The present stiff tubes furnished for this purpose have long been found imperfect and unsatisfactory to the electrical engineer and constructor. The ***rigidity*** of the tube makes it an impossibility to install in buildings already constructed, without cutting the surface of the wall or ceiling; and the ***numerous*** joints and elbows make the drawing in of wires very difficult.

In any system of interior tubing, the first cost of the tube is in a measure immaterial; but the cost of the connections and elbows and the cost of labor in applying same, is the most important factor. There is also an equity to be figured in the ***waste*** of ***short*** and ***damaged*** lengths, hich are practically worthless.

The ***Flexible Conduit*** recommends itself, because:—

1. It is thoroughly flexible.
2. It is thoroughly waterproof.
3. It requires no joints or elbows.
4. It will not readily ignite.
5. Wires will not stick in it.
6. It can be furnished in any length.

While the first cost of our tubing may seem high, we would suggest that consumers figure the cost of a ***short, stiff tube,*** the cost of ***joint sleeves,*** the cost of the ***elbows,*** the cost of the ***labor*** in applying same, and the probable ***waste*** in odd and damaged lengths; and net cost will show the economy of Flexible Conduit.

## IRON ARMORED CONDUIT . . . . . .

*Iron Armored* Circular Loom Conduit will be ready for delivery *May first,* and orders are now being entered for shipment on that date.

As is the case with the *flexible* conduit, experiment shows that the *Armored* Conduit will be the *most economical* and *satisfactory* conduit on the market.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS,

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

# Westinghouse Electric & Mfg. Co.,

Sole owners of the fundamental patents covering Polyphase Alternating Current Motors, issued by the United States Patent Office to ***Nikola Tesla.***

The system adopted by the Cataract Construction Company for their great plant at Niagara.

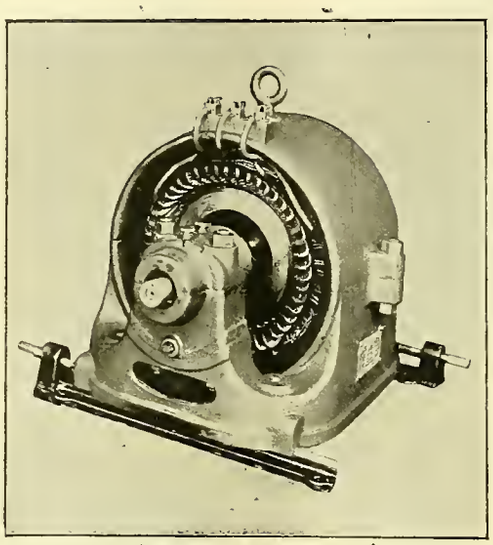
Especially adapted to transmission of power over great distances.

The ideal system for distribution of power in factories and mills.

All machinery in the New Works of the ***Westinghouse Electric & Manufacturing Company*** at East Pittsburg, Pa., is driven by Tesla Polyphase Motors, supplied from a central power plant.

***RESULTS:***--High Efficiency as compared with ordinary methods of shafting and belting: Convenience, Economy and Flexibility secured.

Inspection invited.



# NOTICE IS GIVEN

That induction motors operated by the so-called "Monocyclic" system offered for sale by the General Electric Company are in fact multiphase motors and are broadly covered by the patents of Nikola Tesla owned by the Westinghouse Electric & Manufacturing Company.

The motors and system of distribution advertised by the Stanley Electric Company of Pittsfield are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Company to bring suits against all users of apparatus infringing the Tesla patents, in order that the rights of the company may be enforced.

**PARTRIDGE** Send for Samples.

Sandusky, Ohio. **CARBON CO.**

**DRY BATTERIES.**

BEST OF ALL IS **THE STANDARD,**

Made by J. H. RUNNELL & CO., 76 Cortlandt St., New York.

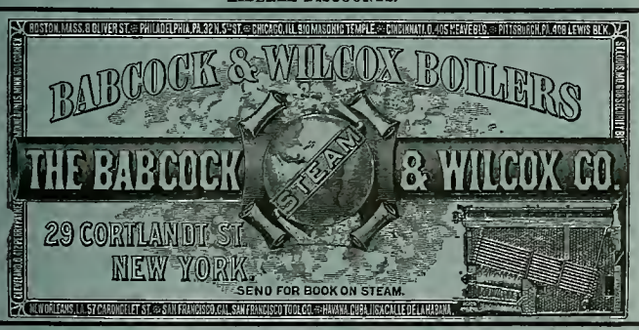
Best Construction and Ingredients. Strongest, most Durable and Reliable. Size 6x2½, 60 cts. per doz. LIBERAL DISCOUNTS.

THE **VERDICT** OF ALL USERS OF **COLUMBIA** INCANDESCENT LAMPS IS THAT THEY ARE THE **BEST.**

**THE COLUMBIA INCANDESCENT LAMP COMPANY,**

Main Office and Factory: 1910, 1912, 1914 Olive Street, ST. LOUIS.

CHICAGO OFFICE: 1564 Monadnock Building. NEW YORK OFFICE: 1101 Havemeyer Building. BOSTON OFFICE: 620 Atlantic Avenue.



**GRAPHITE SPECIALTIES**

FOR ELECTRICAL USES:

Graphite Rods of Various Lengths, from 1-5 Ohm to 100 Ohms Resistance to the inch. Graphite Boxes and Crucibles, Resisting Heats of 4,000 Degrees. Inquiries Gladly Answered.

JOS. DIXON CRUCIBLE CO., Jersey City, N. J.

**STEAM ENGINEERING**

TAUGHT BY MAIL THOROUGH PRACTICAL

*(Stationary, Locomotive or Marine); Mechanics; Mechanical Drawing; Electricity; Architecture; Architectural Drawing and Designing; Masonry; Carpentry and Joinery; Ornamental and Structural Iron Work; Railroad Engineering; Bridge Engineering; Municipal Engineering; Plumbing and Heating; Coal and Metal Mining; Prospecting, and the English Branches.* Students make rapid progress in learning to Draw and Letter. The Steam Engineering course is intended to qualify engineers to secure Licenses. Send for free Circular, stating the subject you wish to study, to

The International Correspondence Schools, Scranton, Pa.

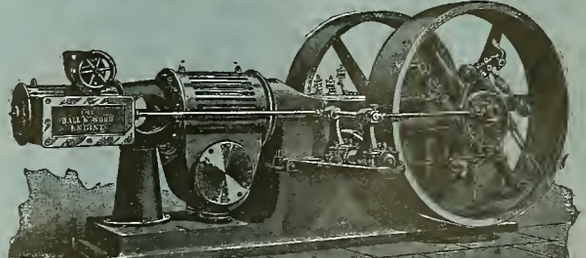
Trade **ROLL-DROP** Mark

COMMUTATOR BARS.

FOREST CITY ELECTRIC WORKS, - Cleveland, Ohio.

**THE BALL & WOOD COMPANY,**

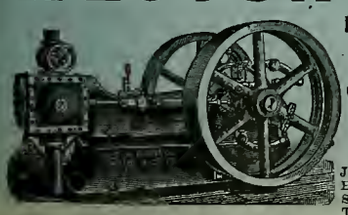
Builders of Improved Automatic Cut-off Engines.



REPRESENTATIVES:

Stern & Silverman, 707 Arch St., Philadelphia, Pa.
George M. Kenyon, Endicott Arcade, St. Paul, Minn.
C. E. Sargent, Home Ins. Bldg., Chicago, Ill.
James & Company, Chattanooga, Tenn.

**WESTON ENGINES.**



High Pressure Boilers.
Complete Power Plants.
Estimates and Drawings Submitted.

WESTON ENGINE CO., PAINTED POST, N. Y.

REPRESENTATIVES.

JULIAN SCHOLL & CO., - 126 Liberty St., N. Y. City.
HOFFMAN-RUSSELL CO., - 82 Lake St., Chicago, Ill.
SCRANTON SUPPLY & MACH'Y CO., - Scranton, Pa.
THOS. K. CAREY & BROS. CO., 26 Light St., Baltimore, Md.

# SCHEEFFER'S RECORDING WATT-METER.

For Alternating Circuits. No Commutator. No Brushes.

Registers Direct Actual Power Consumed.

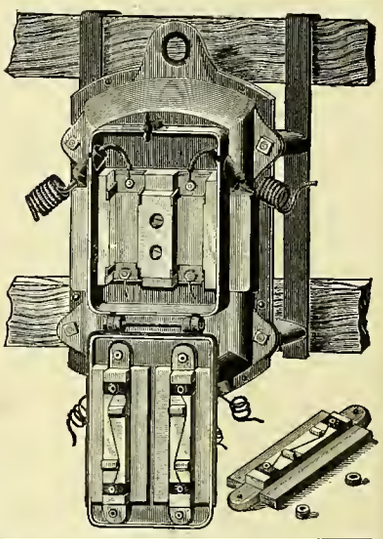
EASILY ADJUSTED. ABSOLUTELY RELIABLE.

# DIAMOND TRANSFORMER.

Simplest, Safest and Best.

FOR ANY VOLTAGE. FOR ALL SYSTEMS.

## DIAMOND ELECTRIC CO., Peoria, Ill.



# SAWYER-MAN INCANDESCENT LAMPS,

## With Bases to Fit Any Socket.

We have now resumed the manufacture of the well-known Sawyer-Man Lamps, on a scale to meet any possible demand.

We have adopted new methods of manufacture which add to the appearance and quality of our lamps, and make them by reason of their efficiency and long life, the cheapest and best lamps ever offered.

PRICES:

**PLAIN LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 25 cents each. |
| 20 and 25 candle power lamps | 30 " |
| 32 candle power lamps | 38 " |
| 16 candle power street car lamps | 25 " |
| 16 candle power street car lamps, anchored | 32 " |

**ORNAMENTAL LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 30 cents each. |
| 20 and 25 candle power lamps | 35 " |

Discounts according to quantity.
For etching the plain or ornamental lamps, 3½ cents each, net.

**COLORED LAMPS.**

"Dipped" lamps in red, blue or green, 5 cents each, net, additional.

Lamps with bases to fit Thomson-Houston sockets, 3 cents extra.
Boxing and packing at cost.

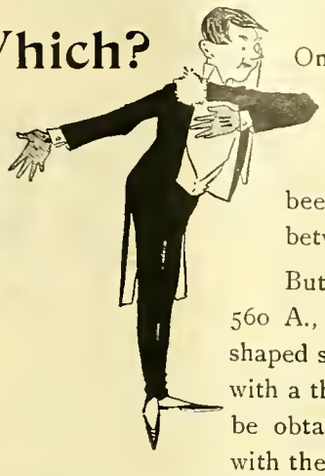
# Which?



One man contends that the crescent-shaped piece is a "rudder." Another argues, and proves to his *own* satisfaction, that it's a "sail." We give it up—leave it to you—our nautical education has been neglected, and we probably couldn't distinguish between a rudder and a squall.

But we know **results.** This is a regular **Lundell,** 560 A., mounted on a ball-bearing stand; the crescent-shaped sail? or rudder? is braced to an ornamental spar with a thumb-screw. Any speed of gyration desired can be obtained by taking a reef in the sail (for instance) with the thumb-screw.

**And what a delight** the motor is! There is more breezy joy lurking in its wake than we can begin to tell of. *Must be seen to be fully appreciated.*

---

A dozen styles to select from for all kinds of circuits, direct, alternating, battery. 50 to 250 volts. If our Special Fan Motor Catalogue has not reached you, write for it.

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Test Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.

THE

# "CLARK" WIRE.

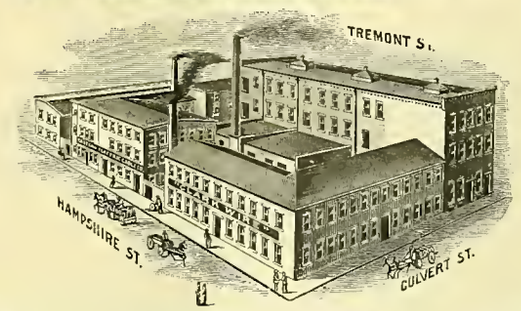
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## BINDERS —FOR THE— WESTERN ELECTRICIAN, ONE DOLLAR.

# Siemens & Halske Electric Company of America,

Siemens & Halske, Berlin, Charlottenburg, Vienna, St Petersburg.

MANUFACTURERS OF

# DIRECT CURRENT SLOW SPEED MULTIPOLAR GENERATORS AND MOTORS.

These machines are constructed with **external armatures.** They have proved remarkably efficient and economical. Used largely in American and European Lighting and Railway Plants. Slow speed machines, made for direct-connection in sizes from 20 H. P. to 2000 H. P.

**Advantages of our External Armature Type.** Maximum peripheral speed of armature with slowest engine speed. Shortest possible winding on armature. Lowest internal resistance of Armature. Only three to four volts difference of potential between commutator bars. Greatest weight of copper per ampere of current. Greatest radiating surface possible. Maximum magnetic effect. Armatures cannot burn out. Great compactness. Correct mechanical design. (The centrifugal force is counteracted effectively by the inward pull of the internal field magnets.) Finest quality of iron, excellent finish, absence of binding wire. **In 8 years' continuous service not one armature has been replaced or repaired.**

**OVER 200,000 H. P. IN USE for Railway, Lighting and Motor Service.** World's Fair Diploma and Medal for **best** direct connected Generator.

## MODERATE SPEED BIPOLAR GENERATORS AND MOTORS,

With Siemens Drum Armatures, which are copied extensively in this country. We are building these machines in sizes from 1 H. P. to 150 H. P.

## NOTICE.

*To the Managers, Superintendents and other officers of the Gas and Electric Companies of Texas:*

GENTLEMEN:—In response to a circular letter sent out some weeks ago relative to an organization of the Texas Gas and Electric men, on lines similar to the "Ohio," "National," "American," and other well known organizations of lighting men, many prominent men have expressed their approval of the move, and join in a call for a meeting. Several have written at length expressing the most hearty approval of the move, and urging that each officer of a gas or electric company, and especially those connected with the smaller companies, be invited to attend and take part in the preliminary as well as permanent organization.

All interested in the Gas or Electric business are cordially invited to attend our meeting, and as it will probably be deemed wise to arrange for associate members, those wishing to do so may join as associate members.

The meeting will be a strictly business affair—no banquets, excursions, or "blow-outs" of any description, but we all expect to have a thoroughly enjoyable time, nevertheless

Membership fee will be small, annual dues not burdensome, and expenses must be kept at a minimum.

Arrange to be with us at the first meeting at

**Houston, Tex., May 22, at 10 a. m.,**

"Mason's Hall," Mason block, corner Main St. and Rusk Ave. Or, if you can not be present, send in your application for membership, that we may know that you wish to be identified with us.

Many favored Houston and May as the place and time for meeting, and the very low excursion rates, on account of Confederate Veterans' Reunion (one fare for round trip, with maximum of $5.00 within the State), makes it especially desirable to meet there.

AUSTIN, TEX., April 20th, 1895.

## T.-H. Transformers Cheap.

Are changing our voltage and have for sale 20,000 lights' capacity, sizes from 10 to 150 lights, 1,000 volts primary, 52 or 104 volts secondary, all in excellent condition. Write for prices.

New Omaha T.-H. Electric Light Co.,
OMAHA, NEB.

## WANTED.

Man to take full charge of an electric lighting plant of a city of 7,000, with no investment. A good thing for the right man. Correspond with

*Box 352*, GALENA, ILL.

## Dynamos and MOTORS.

25 to 800 Lights. ½ H. P. and upward.

TRY THEM AND WONDER WHY YOU EVER USED ANY OTHER.

**O. S. PLATT, - 88-102 Cannon St., Bridgeport, Conn.**

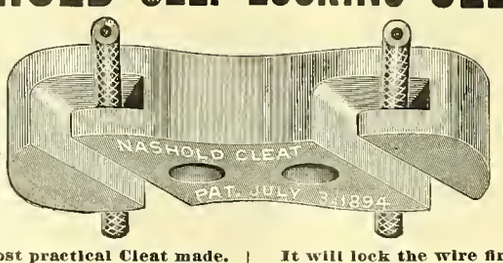
## Proposals.

Notice is hereby given to all electric light companies supplying light to cities, that the contract by which the city of Johnstown, Pa., is now lighted will expire in September, 1895, and the councils of the city of Johnstown hereby invite proposals for the furnishing of light to the city for a term of three or five years. About two hundred (2,000 candle power) arc lamps will be required. The right of way over and through the streets and alleys will be granted for the erection of poles A plant can be centrally located and supplied with coal at less than one dollar per ton All communications to be addressed to

JNO. J. BROWN,
City Controller. JOHNSTOWN, PA.

## NASHOLD SELF-LOCKING CLEAT.

Patented in U. S., Canada, England, France, And Applied for in Germany.



FOR SALE BY ALL ELECTRICAL SUPPLY HOUSES.

**It is the most practical Cleat made.**
**It is made of finest glazed porcelain.**
**It is in one piece.**
**It has the strength.**
**It will lock the wire firmly.**
**It will NOT break in putting up.**
**It will NOT hold moisture.**
**It will NOT hurt the insulation.**

The wire can easily be put in place or removed without loosening the Cleat. It is a great saver in Time and Labor over any other Cleat in use for putting up Electric Light or other Wires.

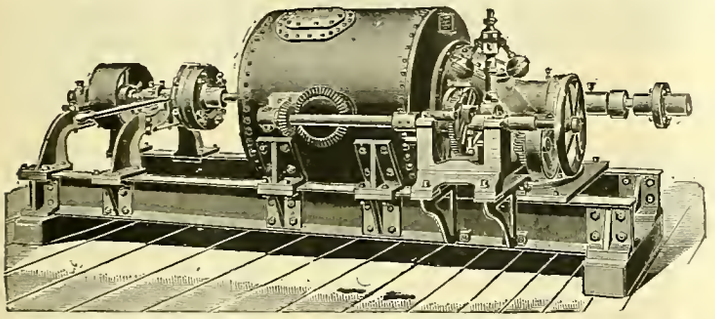
# VICTOR TURBINE WATER WHEEL.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

***SEND FOR CATALOGUE AND PARTICULARS.***

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke Mass., on the dates named, and signed by A. F. Stickmao, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Start Saturday afternoon.
Come back Monday morning.
Four dollars for a round trip ticket.
Parlor car seats reserved in advance.
Chicago Ticket office, 207 Clark Street.

**NORTH STAR POINTS**

is the title of a book of reference for all points between Chicago and Lake Superior on the line of the Milwaukee & Northern R. R., and is a valuable publication for business men and tourists who may be interested in the development of the agricultural, mineral and timber resources of Northern Wisconsin and the Upper Peninsula of Michigan. This book, together with an illustrated pamphlet telling "*Where the Trout Hide*" will be sent free upon application to Geo. H. Heafford, General Passenger Agent, "North Star Route," Chicago, Ill.

**Improved Racine High Speed**

## AUTOMATIC ENGINES

SUPERIOR REGULATION AND ECONOMY FOR ELECTRIC LIGHTING AND GENERAL PURPOSES

All sizes carried in stock.
Over 2,000 in use.

Marine and Yacht Engines, Porcupine and Tubular Boilers.

## PHOSPHOR-BRONZE

INGOTS, CASTINGS, WIRE, SHEET &c.

THE PHOSPHOR BRONZE SMELTING CO. LIMITED
2200 WASHINGTON AVE. PHILADELPHIA, PA.

ORIGINAL MANUFACTURERS OF PHOSPHOR-BRONZE IN THE UNITED STATES AND SOLE MAKERS OF "ELEPHANT BRAND" PHOSPHOR-BRONZE.

# Westinghouse Electric & Mfg. Co.,

Sole owners of the fundamental patents covering Polyphase Alternating Current Motors, issued by the United States Patent Office to ***Nikola Tesla.***

The system adopted by the Cataract Construction Company for their great plant at Niagara.

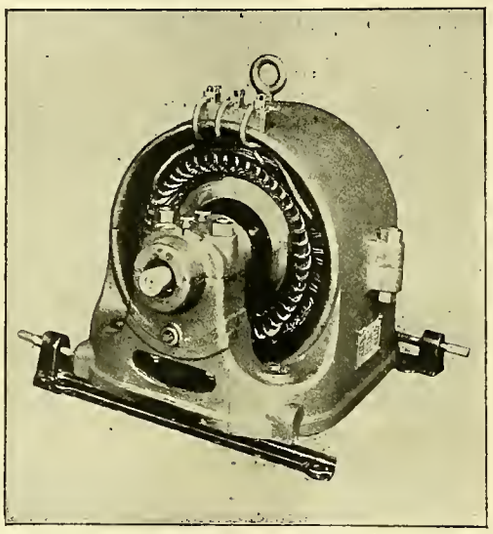
Especially adapted to transmission of power over great distances.

The ideal system for distribution of power in factories and mills.

All machinery in the New Works of the ***Westinghouse Electric & Manufacturing Company*** at East Pittsburg, Pa., is driven by Tesla Polyphase Motors, supplied from a central power plant.

***RESULTS:***—High Efficiency as compared with ordinary methods of shafting and belting: Convenience, Economy and Flexibility secured.

Inspection invited.



# NOTICE IS GIVEN

That induction motors operated by the so-called "Monocyclic" system offered for sale by the General Electric Company are in fact multiphase motors and are broadly covered by the patents of Nikola Tesla owned by the Westinghouse Electric & Manufacturing Company.

The motors and system of distribution advertised by the Stanley Electric Company of Pittsfield are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric & Manufacturing Company to bring suits against all users of apparatus infringing the Tesla patents, in order that the rights of the company may be enforced.

SOLE MANUFACTURERS OF

## Chloride Accumulator

TRADE MARK REG. SEPT 11, 1891

Experience absolutely proves that Electric Light and Power Plants cannot be reliably or economically operated without Accumulators.

ELECTRICAL STORAGE CELLS OF ANY DESIRED CAPACITY

# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multi-phase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

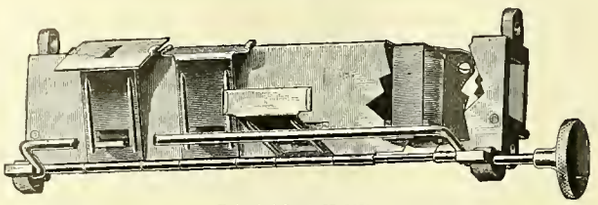
"C" STYLE.
Made in Sizes from 4 to 20 Drops.

# ANNUNCIATORS

That never fail to Annunciate.



Patented Sept. 27, 1892.

This illustrates the inside construction of our Gravity-Drop Annunciator as applied to the 4 Drop "Eclipse" Case.

No Springs. No Screws. Nothing to get out of adjustment. Simplicity itself.

*Our other Specialties:*

**REX** Wood-box Bells,
**ECLIPSE** Iron-box Bells,
**SPARK** Coils,
**WOOD** Push Buttons,
Floor Pushes,
Door Connections, etc., etc.

## PROCTOR-RAYMOND ELECTRIC CO.,

Rochester, N. Y.

# SAWYER-MAN INCANDESCENT LAMPS,

## With Bases to Fit Any Socket.

We have now resumed the manufacture of the well-known Sawyer-Man Lamps, on a scale to meet any possible demand.

We have adopted new methods of manufacture which add to the appearance and quality of our lamps, and make them by reason of their efficiency and long life, the cheapest and best lamps ever offered.

PRICES:

**PLAIN LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 25 cents each. |
| 20 and 25 candle power lamps | 30 " |
| 32 candle power lamps | 38 " |
| 16 candle power street car lamps | 25 " |
| 16 candle power street car lamps, anchored | 32 " |

**ORNAMENTAL LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 30 cents each. |
| 20 and 25 candle power lamps | 35 " |

Discounts according to quantity.
For etching the plain or ornamental lamps, 3½ cents each, net.

**COLORED LAMPS.**

"Dipped" lamps in red, blue or green, 5 cents each, net, additional.

Lamps with bases to fit Thomson-Houston sockets, 3 cents extra.
Boxing and packing at cost.
Prices are subject to change without notice.

## THE FAN MOTOR.

As much ingenuity has been bestowed on the fan motor of late years, in this country, as upon any other piece of electrical apparatus, without exception. It is peculiarly an American idea, not only in the skill with which it has been rapidly perfected, but the swiftness with which it has been introduced, and the variety of its adaptations. Our climate in summer made it welcome with everybody here, but even in Europe there is a loud call for it and the demand from the tropics keeps up and grows the year around.

Large as the output of fan motors has been in past seasons, there are many indications that the market this spring and summer will be broader than ever. Many reasons exist for this. In the first place, fan motors are cheaper and are better built than in bygone days, and they are certainly far more economical of current. For so small a piece of mechanism, the average efficiency of many of them now popular is amazingly high. Moreover, they will run a whole season through without attention, after first setting up in May; and if any repairs are needed in occasional instances, they are slight. Greater care is now paid to the finish; and the ingenious variety of shape and adjustment enables the installer and customer to meet almost any condition, no matter how small or narrow the room. It is curious to note also, that many men who have become accustomed to fan motors in their offices, have learned to use them in their homes, whenever current is available; and wives and families are found to be equally appreciative of a little steady cool air. Many are the bedrooms also, nowadays, into which fan motors have found their way as pleasant, soothing aids to sleep during the sultry summer nights.

There are still a great number of central station managers who have not worked up a summer fan motor trade and who remain indifferent to its opportunities. We venture to hope that this year all will fall in line. Business is quickly improving, it is true, but no chance to turn an honest penny can be neglected; and far more pennies lie waiting in fan work than would appear at first sight. In other words, just when the income would normally be falling off, on account of the longer daylight, it is increased, and that at a time of day when the generating plant is running but is underloaded. If the station does not itself place the fan motors, there are now plenty of energetic local electrical engineers and supply houses who should be encouraged. We have heard of one busy agent in New York who sold 900 fan motors during last season, and who bids fair to beat that handsome record this year.

Not long ago, the direct current fan motor was alone available, and in a limited range of voltages. Now the flexibility of the direct current motor service has been greatly increased not only by primary batteries but by the persistent and successful efforts made to accustom people to take in stored current just as they do ice and milk. But there is a distinct new field in the alternating fan motors, several good types of which claim patronage this year and should be looked into carefully by station managers.

Perhaps a word of caution may be offered in regard to installation. In many instances the fan motor line is simply plugged into a lamp socket, but often it is a special piece of work, and we have seen some careless use of flexible cord that must be condemned. We believe that people are ready and willing to pay for good, careful wiring work, and that if they get it, they will be induced to make further trial of electricity; so that electric light becomes an entering wedge for electric power, the use of motors an argument for electric heating, and all three an irresistible recommendation for unknown and unfamiliar electrical arts destined each to occupy a vast stretch of profitable territory in the near future.—*Electrical Engineer.*

# The Gospel Truth

Of the accompanying article so aptly and clearly expresses what we feel that we desire if possible to give it wider publicity.

Are you fully alive to the possibilities of a brisk Fan Motor season? Had it occurred to you that the usual decrease of revenue, incident to the long summer days, might be counteracted and more than recovered by a Fan Motor Service? Why not make a specialty of it this year? We are anxious to aid the good work in every possible way. We cannot accomplish great things without your co-operation. If you will make the effort we will supplement it by furnishing the best Fan Motor made. We carry a large stock of Lundells, already packed, ready for instant shipment. You can't make a mistake in buying these Fans; they will substantiate the most sanguine expectation of a perspiring public. Sail in.

To-day we talk of Fan Motors; to-morrow of Okonite; again of Interior Conduit, or Pharos Incandescent Lamps, or Helios Arc Lamps, or some one of the many specialties which we manufacture or control in the West. This appears to us to be the best method of advertising these particular articles, but at the same time we do not wish you to overlook the fact that we are pre-eminently **electrical supply dealers** and carry the largest stock of general electrical merchandise in this country. We do not write this in any spirit of empty braggadocio or vanity; it is simply history.

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Test Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.
Colored Glass Insulators to designate different currents.

**WORK ON SPECIAL DESIGNS A FEATURE.**

Send Model or Drawing and we will furnish estimates.

THE

# "CLARK" WIRE.

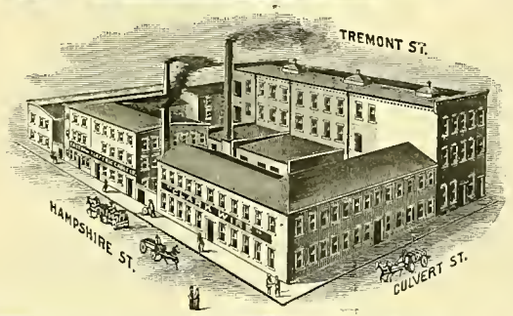
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## NOTICE.

*To Steam Users, and others interested in the manufacture, purchase, or use of, and sale, of Steam Boilers.*

Having been granted Letters Patent on a "Safety Water Tube Boiler," of the "type" and "class" in which the Steam and Water drums are arranged and located transversely to the flow of products of combustion in their travel from the furnace to out-take to stack, of which the "Stirling" and "Pierepoint" are examples. My patents cover, in a fundamental degree, devices and arrangements, for the maintenance of continuous circulation throughout the entire boiler system, and, it having become known to me that certain parties are offering for sale boilers of this class, for which boilers they claim such continuous circulation, it is, therefore, necessary for me to notify manufacturers, users, buyers and sellers, and those who may be acting as agents for the sale of such boilers, that the same are a direct infringement of my patents, which it is my purpose to protect to the utmost extent, at the same time to guarantee to all purchasers of my Boilers the fullest protection against claims or litigation on the part of any and all patentees of Water Tube Boilers.

**L. M. MOYES,**

# Proposals.

Notice is hereby given to all electric light companies supplying light to cities, that the contract by which the city of Johnstown, Pa., is now lighted will expire in September, 1895, and the councils of the city of Johnstown hereby invite proposals for the furnishing of light to the city for a term of three or five years. About two hundred (2,000 candle power) arc lamps will be required. The right of way over and through the streets and alleys will be granted for the erection of poles. A plant can be centrally located and supplied with coal at less than one dollar per ton. All communications to be addressed to JNO. J. BROWN,

City Controller. JOHNSTOWN, PA.

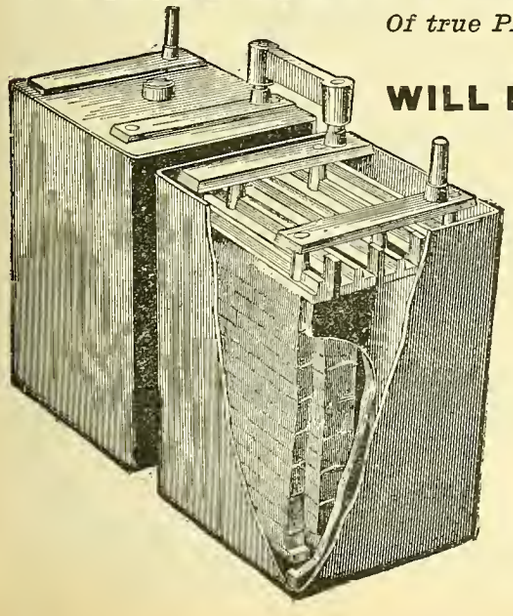
# STANDARD PLANTE STORAGE BATTERIES



*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.

**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

**CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS,

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Continuous Current
**Dynamos and Motors:**
THEIR THEORY, DESIGN, AND TESTING.
With Sections on Indicator Diagrams, Properties of Saturated Steam, Belting Calculations, Etc.
AN ELEMENTARY TREATISE FOR STUDENTS.
By FRANK P. COX, B.S.
**Cloth. 271 Pages, 83 Illustrations. Price $2.00.**

Intended for students, this work gives the theory and design of continuous current dynamos and motors as understood and practiced in the designing-room, and the methods of testing described are those of the factory testing-shop. The practical side of the various questions treated is always kept in view, discussions having little bearing in this direction being excluded, and the higher branches of mathematics avoided. The application to the design of armatures, field-magnets and motors of the principles developed is explained by reference to numerical problems, thus thoroughly impressing them on the student's mind. Methods of testing a complete machine and of investigating its characteristics are given, with discussions on the effect of various changes in design and operation. The steam-engine being so closely allied to the testing and operation of dynamos and motors, sections on indicator diagrams, steampower calculations, and belting are included. Almost all of the numerous curves in the book are derived from actual commercial tests.

CONTENTS.

Chapter I. The Absolute System of Measurement.—Chapter II. Electro-Magnetic Induction.—Chapter III. Classification of Machines and General Principles of the Magnetic Circuit.—Chapter IV. The Dynamo as a Motor.—Chapter V. Calculations Pertaining to the Magnetic Circuit.—Chapter VI. Theory of Windings, Losses, etc.—Chapter VII. The Dynamo Considered as a Motor.—Chapter VIII. Design of Armatures.—Chapter IX. Design of field-magnets.—Chapter X. Design of Motors.—Chapter XI. Dynamo and Motor Testing.—Chapter XII. Efficiency Tests.—Chapter XIII.—Indicator Diagrams.—Chapter XIV. Steam-Engine Calculations.—Appendix I. Tests of Iron.—Appendix II. Ampere Turn-tables.—Appendix III. Determination of Sizes of Wire for Armatures and Field Coils.—Appendix IV. Belting.

**THE McCORMICK TURBINE,**
On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

**Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made.** All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

**S. MORGAN SMITH, York, Pa.**
Estimates furnished for complete power plants and results guaranteed.

# Dictionary of Electrical Words, Terms and Phrases.

**By EDWIN J. HOUSTON, A.M.**

**562 double-column Pages. 570 Illustrations. Cloth Binding. Type Pages 10 x 7 inches. Price, postage Prepaid, to any part of the world, $5.00.**

This Dictionary includes 5,000 **distinct Words, Terms and Phrases.** Each of the great classes or divisions of electrical investigation or utilization comes under careful and exhaustive treatment. For some reasons it deserves rather to be called an **Encyclopædia** than a dictionary.

**The Scheme of Treatment** is as follows:

1st. The words, terms and phrases are invariably followed by a **short, concise definition,** giving the sense in which they are correctly employed.

2d. A general statement then follows of the **Principles of Electrical Science** on which the definition is Founded.

3d. When, from the complexity of the apparatus, or from other considerations, it has been thought desirable to do so, an **Illustration or Diagram** of the apparatus is given.

4th. To facilitate study, an elaborate system of **Cross References** has been adopted, so that it is as **easy to find the definitions** as the words, and aliases are readily detected and traced.

In applying these rules great care has been exercised to secure **CLEARNESS,** to the end that while the definitions and explanations shall be SATISFACTORY TO THE EXPERT ELECTRICIAN, they shall also be SIMPLE AND INTELLIGIBLE to those who have had no training at all in electricity, or are novices in the art.

# Alternating Currents.

An Analytical and Graphical Treatment for Students and Engineers.

By FREDERICK BEDELL, PH.D.,

AND

A. C. CREHORE, PH.D.

Cloth, 325 pages, 112 illustrations, Price, $2.50.

The present work is the first book that treats the subject of alternating currents in a connected, logical, and complete manner. The principles are gradually and logically developed from the elementary experiments upon which they are based, and in a manner so clear and simple as to make the book easily read by any one having even a limited knowledge of the mathematics involved. By this method the student becomes familiar with every step of the proces of development, and the mysteries usually associated with the theory of alternating currents are found to be rather the result of unsatisfactory treatment than due to any inherent difficulty. The first fourteen chapters contain the analytical development, commencing with circuits containing resistance and self-induction only, resistance and capacity only, and proceeding to more complex circuits containing resistance, self-induction, and capacity, and resistance and distributed capacity. A feature is the numerical calculations given as illustrations. The remaining chapters are devoted to the graphical consideration of the same subjects, enabling a reader with little mathematical knowledge to follow the authors, and with extensions to cases that are better treated by the graphical than by the analytical method.

CONTENTS.

**Part I. Analytical Treatment.**—Chapter I. Introductory to Circuits containing Resistance and Self-induction.—Chapter II. On Harmonic Functions.—Chapter III. Circuits Containing Resistance and Self-induction.—Chapter IV. Introductory to Circuits Containing Resistance and Capacity.—Chapter V. Circuits Containing Resistance and Capacity.—Chapters VI, VII, VIII, IX, X, XI. Circuits Containing Resistance, Self-induction, and Capacity.—Chapters XII, XIII. Circuits Containing Distributed Capacity and Self-induction.

**Part II. Graphical Treatment.**—Chapters XIV, XV, XVI, XVII. Circuits Containing Resistance and Self-induction.—Chapters XVIII, XIX. Circuits Containing Resistance and Capacity.—Chapter XX. Circuits Containing Resistance, Self-induction, and Capacity.

**Appendix A.** Relation between Practical and C. G. S. Limits.—Appendix B. Some Mechanical and Electrical Analogies.—Appendix C. System of Notation Adopted.

---

## NOTICE

Induction motors operated by the so-called "Monocyclic" system, offered for sale by the General Electric Company, are in fact multiphase motors and are broadly covered by the patents of Nikola Tesla owned by the Westinghouse Electric and Manufacturing Company.

The motors and system of distribution advertised by the Stanley Electric Company, of Pittsfield, are also an infringement of the Tesla patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric and Manufacturing Company to bring suits against all users of apparatus infringing the Tesla patents, in order that the rights of the company may be enforced.

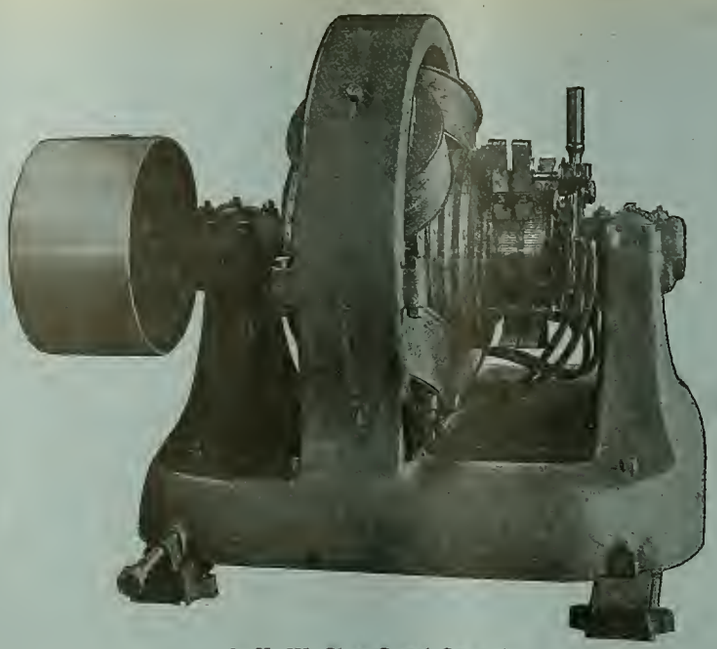
Slow Speed



Moderate Speed

60 K. W. Slow Speed Generator.

# GENERATORS AND MOTORS.

For a medium sized machine having a low speed nothing in the market to-day equals our **SLOW AND MODERATE SPEED GENERATORS AND MOTORS.** They are of superior design, high efficiency, regulate excellently, do not heat and do not spark. Most of the defects familiar in bipolar machines have been eliminated. The Frames are of cast soft steel of highest magnetic permeability, and the machine occupies a minimum floor space. The Armatures are iron-clad and thoroughly ventilated. The Insulation is practically indestructible. The Commutator and Brushes work perfectly under all conditions of load. The Bearings cannot get out of line. The Armature Windings are interchangeable and easily replaceable and are securely supported and protected by the projecting iron spider. In every detail of design and construction these machines hold the highest rank.

The Slow Speed Generators are built in capacities from 4.5 K. W. to 60 K. W. Moderate Speed Generators from 7.5 K. W. to 75 K. W. The Slow Speed Motors are built in capacities of from 1 H. P. to 70 H. P. Moderate Speed Motors from 5 H. P. to 85 H. P. The larger sizes are adapted for direct connection to the engine.

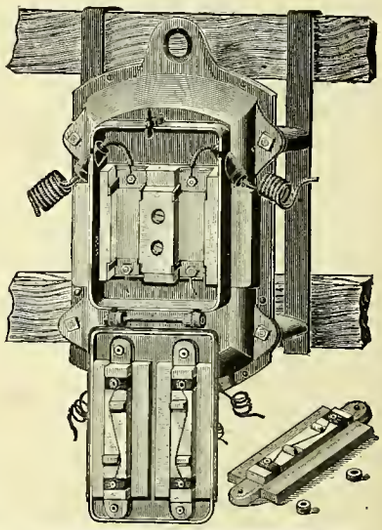
# SCHEEFFER'S RECORDING WATT-METER.

For Alternating Circuits. No Commutator. No Brushes.

Registers Direct Actual Power Consumed.

EASILY ADJUSTED. ABSOLUTELY RELIABLE.



# DIAMOND TRANSFORMER.

Simplest, Safest and Best.

FOR ANY VOLTAGE. FOR ALL SYSTEMS.

## DIAMOND ELECTRIC CO., Peoria, Ill.

Chicago Office, 1307 Manhattan Building, Central Electric Co., Selling Agents.

## Alternating Current ARC LAMPS.

# The Kester '95

**IS THE LAMP YOU HAVE HOPED FOR.**

It is the only perfected Arc Lamp for the alternator, either high or low frequency.

It comprises all that is desired in an Arc Lamp.

Write for pamphlet and prices to

## THE F. P. LITTLE Electrical Construction & Supply Company,

**135 SENECA STREET, BUFFALO, N. Y.**

## WESTERN ELECTRIC COMPANY,

**CHICAGO and NEW YORK.**

# THE UPTON ARC LAMP

**For All Circuits.**

## The Cheapest to Buy, Use and Maintain.

| | |
|---|---|
| Direct current lamps, constant potential, with globe and resistance, to burn 8, 11, 14 hours, | $12.00 |
| Alternating current lamps and globe, | 14.00 |
| Series current lamps and globe, | 14.00 |

## Standard Thermometer Co.,

PEABODY, MASS.

The Original Manufacturers of the

*SIMPLEX, WARD and KNIGHT LAMPS.*

CHARLES A. BRAMHALL, Selling Agent, 39 Cortlandt Street, NEW YORK.

# IMPORTED CARBONS!

GENERAL INCANDESCENT ARC LAMP CO.'S

## BERGMANN LAMPS. KNIGHT ARC LAMP.

**The Above Lines Include ARC LAMPS for Every Service.**

Address Inquiries to **R. B. COREY,** General Sales Agent,

Room 714 Havemeyer Building, NEW YORK CITY.

## Interior Conduit

Has never ben equaled in Quality or Popularity.

## Lundell Fan Motors

The most successful and perfect fan made.

## Pharos Lamps

Carefully constructed to the smallest detail. Life and efficiency answers the most critical demands.

## Okonite Wire

The premier of insulated wires. For use anywhere for any purpose. It never disappoints.

OKONITE IT NEVER DISAPPOINTS

## Central Electric Company,

173=175 Adams St.,
CHICAGO.

Branches: { Kansas City, Mo.: Gate City Electric Co.
St. Louis: Southern Electrical Supply Co.

OKONITE IT NEVER DISAPPOINTS

# ARC LAMPS AND CARBONS.

## Standard "Ward" Arc Lamps

**With Resistance, Clear Globes and Tested Ready for Use, 6½, 8 and 10 Amperes, at $10 Each.**

This price for lamps in pairs. Single lamps with globes and resistance tested, TWELVE dollars.
In lots of 50 or more as received from the manufacturer, without globes, resistances or testing, $7.50 each.

**ALSO LARGE STOCK OF**

Ward Alternating Lamps, Knight Alternating Lamps, Knight Direct Current Lamps, Kinsman Lamps, Focusing Lamps, Photo-Engraving and Stereopticon Lamps, and Ward and Knight High Tension Series Lamps, Twin Lamps, Railroad Lamps,

**ALL AT LOWEST PRICES.**

**ALSO LARGE LOT OF IMPORTED AND DOMESTIC CARBONS**

Of the Following Makes:

LACOMBE, HARDMUTH, SIEMENS & HALSKE, NATIONAL,
FIDELITY, SOLAR, LANCASTER, GLOBE

At Lowest Prices Ever Offered.

Address

## CHAS. H. WATERMAN, 1305 HAVEMEYER BUILDING, 26 Cortlandt Street, NEW YORK.

# INCANDESCENT LAMPS.

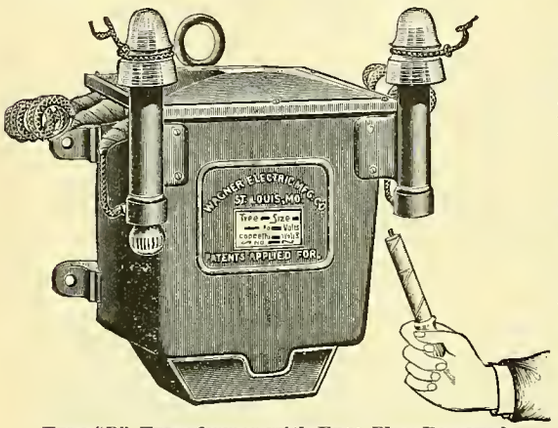
WE MANUFACTURE THE "GLOBE." LIFE AND EFFICIENCY GUARANTEED.

New Process of Exhaustion by Mechanical Vacuum Pump. Absolutely Dry Vacuum. Samples and Prices Furnished on Application. Correspondence Solicited.

**GLOBE ELECTRIC LIGHT CO.,** General Offices: Carter Building. **BOSTON, MASS.**

AGENTS WANTED. WRITE US.

# TRANSFORMERS.



Type "D" Transformer with Fuse Plug Removed.

***A New Type*—*Transformer, Primary Cut-outs and Insulator Brackets all combined.***

**No more brackets pulling off of walls.**

**With our wall or cross-arm hooks, transformer may be *Hung* and *Connected* in *Five minutes.***

**Our new fuse plugs will not hold an arc with 5,000 volts.**

***Our Transformers* are acknowledged by all experts to be the *Highest* in *Efficiency* ever made.**

**Adopted by the largest stations in the country.**

***We Challenge Competition* in any form of test, in laboratory or practical use.**

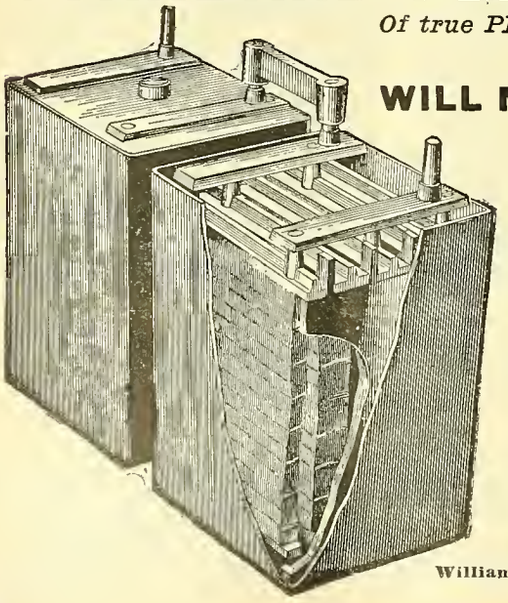
ELECTRICIAN PUBLISHING CO., 6 Lakeside Building, CHICAGO.

# STANDARD PLANTE STORAGE BATTERIES



*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.

**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

**CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

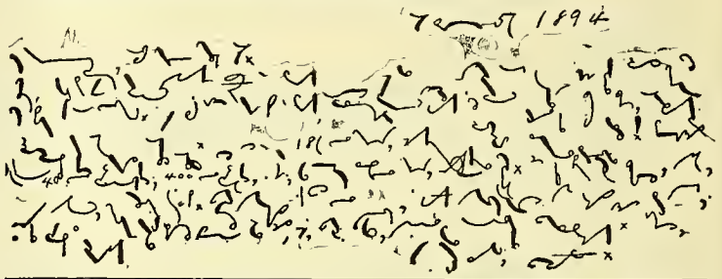
**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

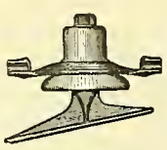
Evening classes, $5.00 per month. 98 per cent. of our students hold positions.



# "Monarch" Insulating Material.

A hard, black composition, which is not liable to crack or break during service, or alter its form under ordinary changes of temperature. It is moulded to exact shape, and is suitable for switch-blocks, sockets, bushings, telephone bases, and other parts requiring accuracy of dimension and finish.

## TROLLEY LINE INSULATORS.



Insulated with Moulded Mica, and designed with special reference to their strength, durability and high insulating qualities.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.
Colored Glass Insulators to designate different currents

**WORK ON SPECIAL DESIGNS A FEATURE.**

## THE "CLARK" WIRE.

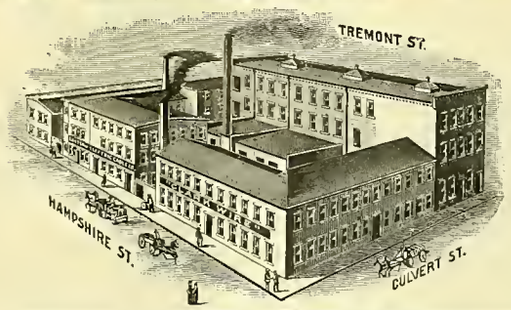
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

**1649, 1650, 1651 MONADNOCK BLDG., CHICAGO, ILLINOIS.**



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## Continuous Current

# Dynamos and Motors:

**THEIR THEORY, DESIGN, AND TESTING.**

With Sections on Indicator Diagrams, Properties of Saturated Steam, Belting Calculations, Etc.

**AN ELEMENTARY TREATISE FOR STUDENTS.**

By FRANK P. COX, B.S.

**Cloth. 271 Pages, 83 Illustrations. Price $2.00.**

Intended for students, this work gives the theory and design of continuous current dynamos and motors as understood and practiced in the designing-room, and the methods of testing described are those of the factory testing-shop. The practical side of the various questions treated is always kept in view, discussions having little bearing in this direction being excluded, and the higher branches of mathematics avoided. The application to the design of armatures, field-magnets and motors of the principles developed is explained by reference to numerical problems, thus thoroughly impressing them on the student's mind. Methods of testing a complete machine and of investigating its characteristics are given, with discussions on the effect of various changes in design and operation. The steam-engine being so closely allied to the testing and operation of dynamos and motors, sections on indicator diagrams, steampower calculations, and belting are included. Almost all of the numerous curves in the book are derived from actual commercial tests.

CONTENTS.

Chapter I. The Absolute System of Measurement.—Chapter II. Electro-Magnetic Induction.—Chapter III. Classification of Machines and General Principles of the Magnetic Circuit.—Chapter IV. The Dynamo as a Motor.—Chapter V. Calculations Pertaining to the Magnetic Circuit.—Chapter VI. Theory of Windings, Losses, etc.—Chapter VII. The Dynamo Considered as a Motor.—Chapter VIII. Design of Armatures.—Chapter IX. Design of field-magnets.—Chapter X. Design of Motors.—Chapter XI. Dynamo and Motor Testing.—Chapter XII. Efficiency Tests.—Chapter XIII.—Indicator Diagrams.—Chapter XIV. Steam-Engine Calculations.—Appendix I. Tests of Iron.—Appendix II. Ampere Turn-tables.—Appendix III. Determination of Sizes of Wire for Armatures and Field Coils.—Appendix IV. Belting.

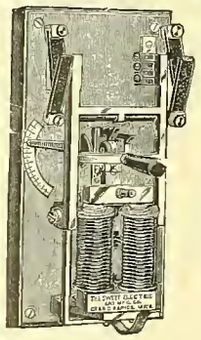
# HOT STUFF.



No! we make the final break off from carbons so that it is impossible to get heat enough to fuse points of your copper contact plates; no filing off of rough points, no hanging on after you have had a short circuit or over load, bound to work as easily after opening 1,000 times as it does when opened the first time.

**WE KNOW YOU NEED OUR CIRCUIT BREAKER,** and do not see why you should delay writing us any longer. One burn out will pay for a dozen of our instruments. **To be used on the Alternating or Direct Current Systems.**

**Write us at once.**

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

**Chloride Accumulator**

*TRADE MARK REG. SEPT 11, 1894*

*Experience absolutely proves that Electric Light and Power Plants cannot be reliably or economically operated without Accumulators.*

ELECTRICAL STORAGE CELLS OF ANY DESIRED CAPACITY

# The S. K. C. Two Phase Alternating Current System.

**THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.**

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multiphase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—**Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.**

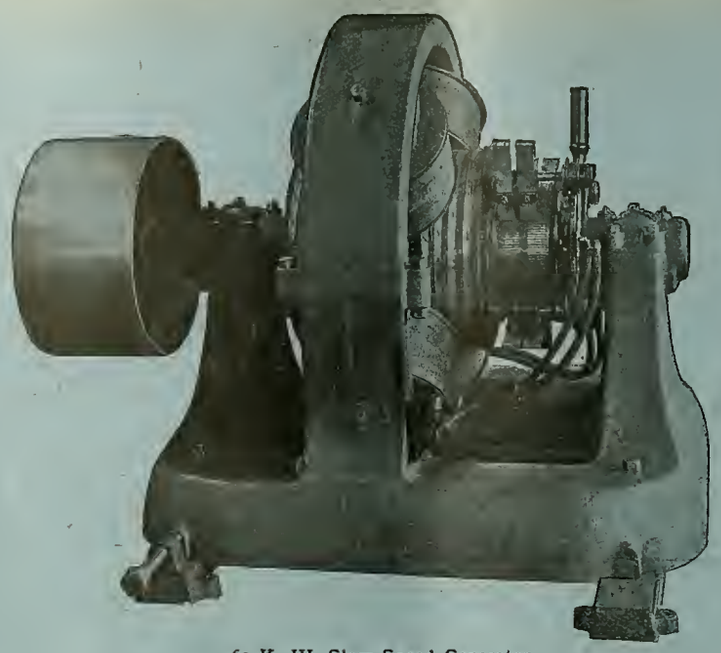
# Slow Speed



# Moderate Speed

60 K. W. Slow Speed Generator.

# GENERATORS AND MOTORS.

For a medium sized machine having a low speed nothing in the market to-day equals our **SLOW AND MODERATE SPEED GENERATORS AND MOTORS.** They are of superior design, high efficiency, regulate excellently, do not heat and do not spark. Most of the defects familiar in bipolar machines have been eliminated. The Frames are of cast soft steel of highest magnetic permeability, and the machine occupies a minimum floor space. The Armatures are iron-clad and thoroughly ventilated. The Insulation is practically indestructible. The Commutator and Brushes work perfectly under all conditions of load. The Bearings cannot get out of line. The Armature Windings are interchangeable and easily replaceable and are securely supported and protected by the projecting iron spider. In every detail of design and construction these machines hold the highest rank.

The Slow Speed Generators are built in capacities from 4.5 K. W. to 60 K. W. Moderate Speed Generators from 7.5 K. W. to 75 K. W. The Slow Speed Motors are built in capacities of from 1 H. P. to 70 H. P. Moderate Speed Motors from 5 H. P. to 85 H. P. The larger sizes are adapted for direct connection to the engine.

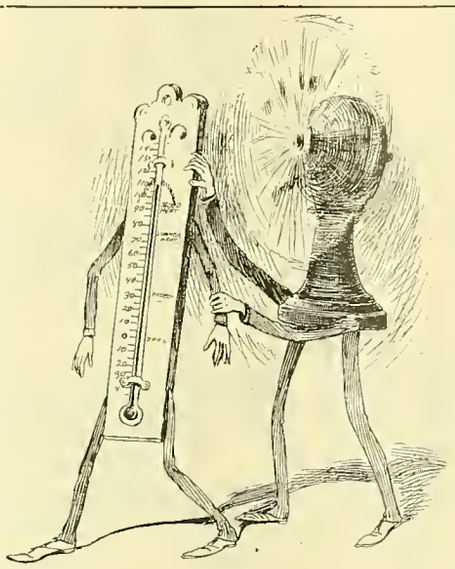
# Suppressed News.



Think of a police officer modest enough to suppress for a full fortnight information of an important arrest! But it's so. The delayed report comes from Inspector Moore's district, Auditorium Tower Station. Two weeks ago our popular but eccentric citizen, Mr. Theo. Mometer, who is known to possess a decidedly mercurial temperament, indulged in a real old fashioned "tear" (pronounced *tare*). About the time he began to feel "comfortable" his neighbors experienced a distressingly uncomfortable feeling. The ever watchful Officer Lundell happened along just then and promptly took the hilarious citizen in tow and landed him in the cooler, where he has since had ample opportunity to sober down and reflect upon the mutability of human affairs. It is rumored that a prominent ice man with a strong pull will bail him out. However this may be, the community has naught to fear so long as Capt. Lundell is on duty. The handsome captain will be remembered as the officer who rendered such efficient service during the hot times last year. Although his name appears but **once** on the pay roll (a distinction in these days of O'Malleys and Sullivans), he is ever alert to his duty. He is one of the finest. —*Tribune.*

# PATENT DECISIONS

Have never yet affected the user of apparatus made by the

## Western Telephone Construction Company.

The recent "Berliner Decision" cannot interfere with its use, although it is claimed that the Berliner patent covers all forms of microphones made by all other Companies.

Do business at fair prices with a Company that is proven RELIABLE and RESPONSIBLE, and avoid trouble and loss.

---

THE FOLLOWING EXCHANGES IN SUCCESSFUL OPERATION (SOME OVER A YEAR) USE "WESTERN" APPARATUS, ACKNOWLEDGED BY THE BEST POSTED TELEPHONE PEOPLE (AND CLAIMED BY US ABSOLUTELY) **NOT TO INFRINCE** ANY PATENT OWNED BY THE BELL COMPANY:—

Cambridge, Ohio, 200 telephone capacity, (formerly had 60 Bell "Microphone"), Bell people offered free service in vain.

Van Wert, Ohio, 150 telephone capacity, (formerly had 65 Bell "Microphone"), Bell exchange system abandoned entirely.

Webster City, Iowa, 150 telephone capacity, (formerly Bell, "Blake," "National" of Boston, and others, now equipped with ***Western.***

Washington, Iowa, 100 telephone capacity, (Bell system would not pay at $48.00 and $36.00, Western system a complete success, earning 20 per cent. at $24 00, and $18 00 per annum.

Decatur, Ind., 100 telephone capacity, (could not afford a Bell system), "Western System" earning good profit at low rates.

Petaluma, Cal., 150 telephone capacity, (operating expense with "Western System" thirty-one cents (31) per telephone per month).

Santa Fe, N. M., 100 telephone capacity, (Bell system "gave up the ghost" after the ***"Western"*** started).

Palatka, Fla., 100 telephone capacity. (What became of the Bell there?)

Palestine, Tex., 150 telephone capacity, (Bell system behind the times—***"Western"*** successful).

Greensboro, N. C., 100 telephone capacity. (***Western*** successful against Bell.)

Salisbury, N. C., 100 telephone capacity, (Bell system "not in it" with ***"Western"*** there).

---

But why again enumerate? Buy apparatus that the Bell people have failed to defeat commercially or with patents—from the

# Western Telephone Construction Company,

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert steongrapher or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems,
Colored Glass Insulators to designate different currents

THE

# "CLARK" WIRE.

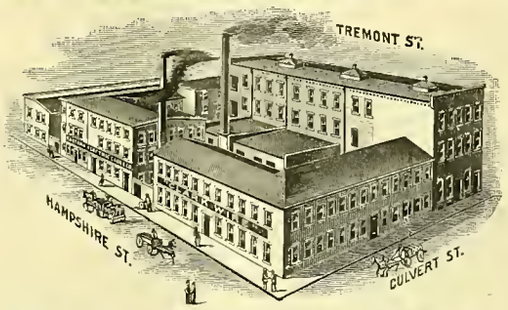
TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

1649, 1650, 1651 MONADNOCK BLDG.,
CHICAGO, ILLINOIS.



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## NOTICE.

*To Steam Users, and others interested in the manufacture, purchase, or use of, and sale, of Steam Boilers.*

Having been granted Letters Patent on a "Safety Water Tube Boiler," of the "type" and "class" in which the Steam and Water drums are arranged and located transversely to the flow of products of combustion in their travel from the furnace to out-take to stack, of which the "Stirling" and "Pierepoint" are examples. My patents covering, in a fundamental degree, devices and arrangements, for the maintenance of contiouous circulation throughout the entire boiler system, and, it having become known to me that certain parties are offering for sale boilers of this class, for which boilers they claim such continuous circulation, it is, therefore, necessary for me to notify manufacturers, users, buyers and sellers, and those who may be acting as agents for the sale of such boilers, that the same are a direct infringement of my patents, which it is my purpose to protect to the utmost extent, at the same time to guarantee to all purchasers of my Boilers the fullest protection against claims or litigation on the part of any and all patentees of Water Tube Boilers.

L. M. MOYES,
[Late Manager Babcock & Wilcox Co.]

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

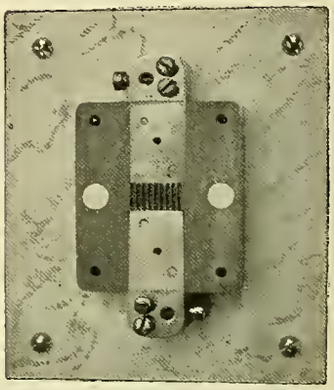
Double Pole Non-Arcing Metal Station Lightning Arrester for Alternating Current Circuits.

## THE WURTZ NON-ARCING LIGHTNING ARRESTERS.



Single Pole Non-Arcing Station Lightning Arrester for Direct Current Circuits.

For all kinds of Direct and Alternating Current Circuits.

Do not require any ***Magnetic Blow-Out*** or ***Other Arc-Rupturiug device.***

9,000 sold last summer.

**NO DYNAMO CURRENT. NO COILS. NO SELF-INDUCTION.**
**NO MOVING PARTS. NO INTERRUPTION TO SERVICE.**
**NO FUSES BLOWN. NO INSPECTION NECESSARY.**
**NO FALLING OUT OF CIRCUIT BREAKERS.**
**NO ARCING AND NO REPAIRS.**

### Extract from report of The Franklin Institute on Wurtz Lightning Arresters.

The various arresters produced by Mr. Wurtz are intended for the protection of electric lighting and power circuits from direct and indirect damage from lightning discharges, and Mr. Wurtz has, apparently, studied this question in a scientific and very exhaustive manner.

With but few exceptions all lightning arresters commonly used, up to the inventions of Mr. Wurtz, have been based upon the fact that static discharges generally tend to "ground" by the shortest distance even when obliged, in order to do this, to jump a considerable "air-gap," in preference to taking a longer path over a much lower resistance. Such arresters, therefore, have been essentially nothing more than two points or sets of points; one being "grounded" and the other connected to one or both legs of the circuit to be protected.

An arrester of this kind, while often affording a release from the static charge, would also allow the dynamo current to follow upon the arc so produced, thus producing either short circuit or a dangerous "ground," and in both cases causing an interruption of the main working circuit. Hence, the more improved arresters of this type were so constructed as to break the dynamo arc as soon as possible. This is easily seen to be a remedy rather than a preventive.

Mr. Wurtz perceived this fact and set himself to the problem of constructing an arrester in which the dynamo arc could not start, rather than one which would break the arc when started. As far as can be judged from recorded data he has succeeded in solving the problem in a very efficient manner, both for alternating and direct current.

The operative features of these arresters conform more closely to recognized laws than those of the devices previously known and used for the purpose. The instruments are cheaper to manufacture, and, as far as the Institute has been able to ascertain, are very effective in preventing damage, and they protect without causing cessation of operations.

In these respects the Institute believes these inventions to be important improvements, and therefore recommends the award of the John Scott Legacy Premium and Medal to their originator, Alexander Jay Wurtz, of Pittsburg, Pa.

Adopted at the stated meeting of the Committee on Science and the Arts, held Wednesday, May 2, 1894. JOSEPH M. WILSON, President.

Countersigned by WM. H. WAHL, Secretary.

ARTHUR BEARDSLEY, Chairman of the Committee of Science and the Arts.

**PRICES ON THESE LIGHTNING ARRESTERS ARE AS FOLLOWS:**

***Double Pole Non-Arcing Metal Lightning Arresters,*** for ***line*** use on alternating current circuits only, $4.50. Discounts as follows: 1 to 10 arresters, 10 per cent.; 11 to 50 arresters, 25 per cent.; 51 or more arresters, 33⅓ per cent.

***Single Pole Non-Arcing Railway Lightning Arresters,*** for ***line*** use on all direct current circuits up to 600 volts, $4.50. Discounts same as above.

ELECTRICAL STORAGE CELLS OF ANY DESIRED CAPACITY

# IMPORTED CARBONS!

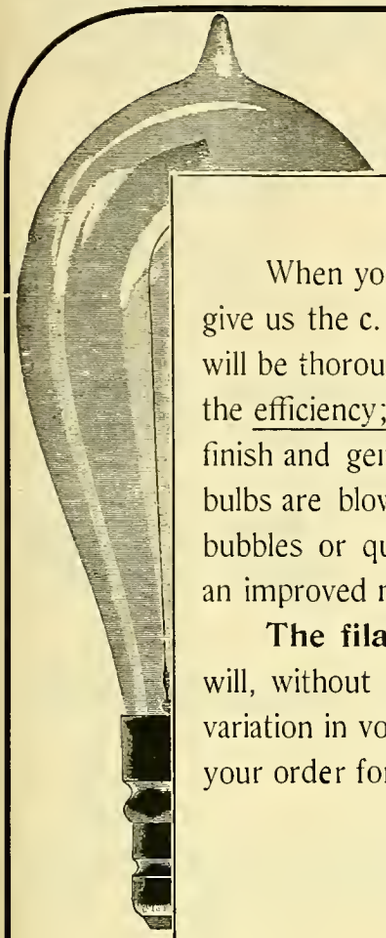
GENERAL INCANDESCENT ARC LAMP CO.'S

## BERGMANN LAMPS. KNIGHT ARC LAMP.

**The Above Lines Include ARC LAMPS for Every Service.**

Address Inquiries to **R. B. COREY,** General Sales Agent,

Room 714 Havemeyer Building, NEW YORK CITY.



When you order **Pharos Lamps** give us the c. p., voltage and base wanted. You will be thoroughly satisfied with the quality; with the efficiency; with the average life and with the finish and general appearance of the lamp. The bulbs are blown from first quality clear glass, no bubbles or quirls. The bases are attached in an improved manner, lamps will not become loose.

**The filaments** are substantially made and will, without injury, stand an unusual amount of variation in voltage. We will be pleased to have your order for 100 as a trial lot.

## Railway Supplies.

Our line of Railway material includes the best specialties that have been put on the market. We are the general western agents for the Billings and Spencer drop-forged trolley equipments, and carry a complete stock in our Chicago warerooms.

GENERAL WESTERN AGENTS

Okonite Wire. Interior Conduit. Lundell Fan Motors. Helios Arc Lamps, Direct or Alternating.

NEW YORK. PHILADELPHIA. BOSTON.

# THE BEST ELECTRIC FAN On the Market.

**For Alternating Current, Wound for 50 or 100 volts.**

The Fan is 14 inches in diameter.
Will always start when current is on.
Positively self-lubricating, will run a whole season without looking after.
It is so constructed as to make it next to impossible to get out of line.
It is carefully made in every detail, almost noiseless, and does not throw sparks.

Agents Wanted in Different Localities.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.
Colored Glass Insulators to designate different currents

THE

# "CLARK" WIRE.

TRADE MARK.

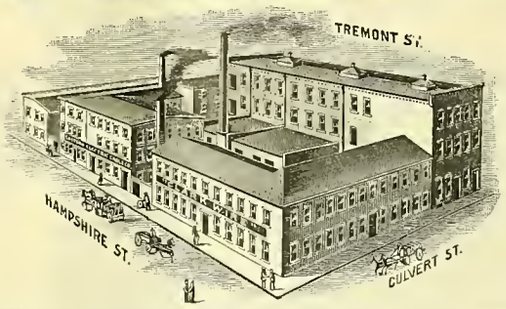
For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

## 1649, 1650, 1651 MONADNOCK BLDG.,

**CHICAGO, ILLINOIS.**



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Under ground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

# *Siemens & Halske Electric Company of America,*

*Siemens & Halske. Berlin, Charlottenburg, Vienna, St Petersburg.*

MANUFACTURERS OF

# DIRECT CURRENT SLOW SPEED MULTIPOLAR GENERATORS AND MOTORS.

These machines are constructed with **external armatures.** They have proved remarkably efficient and economical. Used largely in American and European Lighting and Railway Plants. Slow speed machines, made for direct-connection in sizes from 20 H. P. to 2000 H. P.

**Advantages of our External Armature Type.** Maximum peripheral speed of armature with slowest engine speed. Shortest possible winding on armature. Lowest internal resistance of Armature. Only three to four volts difference of potential between commutator bars. Greatest weight of copper per ampere of current. Greatest radiating surface possible. Maximum magnetic effect. Armatures cannot burn out. Great compactness. Correct mechanical design. (The centrifugal force is counteracted effectively by the inward pull of the internal field magnets.) Finest quality of iron, excellent finish, absence of binding wire. **In 8 years' continuous service not one armature has been replaced or repaired.**

**OVER 200,000 H. P. IN USE for Railway, Lighting and Motor Service.** World's Fair Diploma and Medal for **best** direct-connected Generator.

## MODERATE SPEED BIPOLAR GENERATORS AND MOTORS,

With Siemens Drum Armatures, which are copied extensively in this country. We are building these machines in sizes from 1 H. P. to 150 H. P.

**CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.**

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

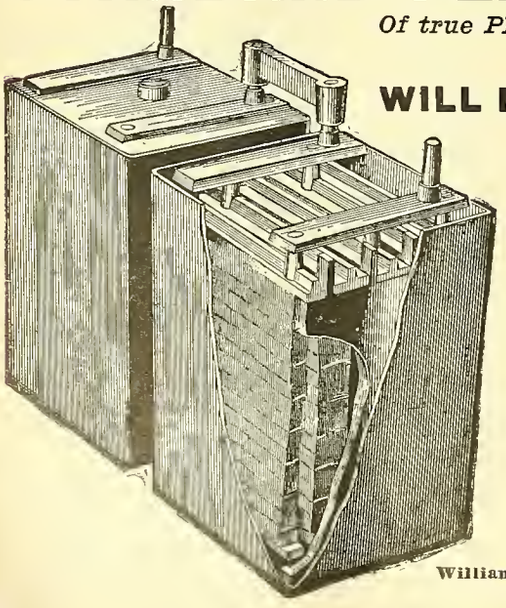
# STANDARD PLANTE STORAGE BATTERIES



*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.

**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

**CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

## DYNAMO ELECTRIC MACHINERY.

By S. P. Thompson.

Fourth edition, revised and re-written. The most complete work on the dynamo published.

900 Pages. Fully Illustrated.

**PRICE, $9.00.**

## DICTIONARY ... OF ... ELECTRICAL WORDS, TERMS AND PHRASES.

By Edwin J. Houston, A. M.

The latest edition of this celebrated work contains over 5,000 distinct definitions. As important as Webster.

**700 Pages.** **750 Illustrations.**

**PRICE, $5.00.**

## THE ELECTRIC MOTOR AND ITS APPLICATIONS.

By Martin and Wetzler.

The first American book on electric motors. A most complete work brought down to date.

325 Pages. 354 Illustrations.

**PRICE, $3.00.**

*THE PRACTICAL MANAGEMENT OF*
## DYNAMOS AND MOTORS.

By Crocker and Wheeler.

The object of this work is to give *simple* directions for the practical use and management of dynamos and motors. This work is having a large sale.

100 Pages. Fully Illustrated.

**PRICE, $1.00.**

## ELECTRIC LIGHT SPECIFICATIONS FOR THE USE OF Engineers and Architects.

By E. A. Merrill.

This work gives the latest rules of The National Electric Light Association, of the National Board of Fire Underwriters, and of The New England Insurance Exchange.

*176 Pages.*

**PRICE, $1.50.**

## THE ELECTRIC RAILWAY IN THEORY AND PRACTICE.

By Crosby and Bell.

This is a complete treatise on the construction and operation of electric railways, and will commend itself to the electrical engineer, and to the practical manager.

*400 Pages.* *Profusely Illustrated.*

**PRICE, $2.50.**

## HIGH POTENTIAL AND HIGH FREQUENCY.

*Experiments with Alternate Currents.*

By Nicola Tesla.

A lecture delivered before the Institution of Electrical Engineers, London.

146 Pages. Fully Illustrated.

**PRICE, $1.00.**

## THE ELECTRIC TELEGRAPH.

By F. L. Pope.

The fourteenth edition of this celebrated work is rewritten and brought down to date. A technical hand-book for electricians, managers and operators.

234 Pages. Illustrated.

**PRICE, $1.50.**

## SCIENCE SERIES.

The series now numbers 103 volumes, and embraces works on every subject.

**16 mo. Boards.**

PROFUSELY ILLUSTRATED.

**Price, 50c. Each.**

## STANDARD ELECTRICAL DICTIONARY.

By T. O'Connor Sloane.

This new work should be in the hands of all who desire to keep abreast with the progress of the greatest science of the times.

600 Pages, 300 Illustrations.

**PRICE, $3.00.**

Any of the above books sent promptly, postage prepaid, on receipt of price.

**SEND IN YOUR ORDER.**

**ELECTRICIAN PUBLISHING CO., 6 Lakeside Bldg., Chicago, Ill.**

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Stockman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

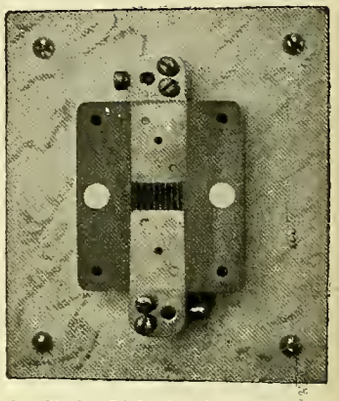
Double Pole Non-Arcing Metal Station Lightning Arrester for Alternating Current Circuits.

## THE WURTS NON-ARCING LIGHTNING ARRESTERS.



Single Pole Non-Arcing Station Lightning Arrester for Direct Current Circuits.

For all kinds of Direct and Alternating Current Circuits.

Do not require any ***Magnetic Blow-Out*** or ***Other Arc-Rupturiug device.***

9,000 sold last summer.

**NO DYNAMO CURRENT. NO COILS. NO SELF-INDUCTION.**
**NO MOVING PARTS. NO INTERRUPTION TO SERVICE.**
**NO FUSES BLOWN. NO INSPECTION NECESSARY.**
**NO FALLING OUT OF CIRCUIT BREAKERS.**
**NO ARCING AND NO REPAIRS.**

### Extract from report of The Franklin Institute on Wurts Lightning Arresters.

The various arresters produced by Mr. Wurts are intended for the protection of electric lighting and power circuits from direct and indirect damage from lightning discharges, and Mr. Wurts has, apparently, studied this question in a scientific and very exhaustive manner.

With but few exceptions all lightning arresters commonly used, up to the inventions of Mr. Wurts, have been based upon the fact that static discharges generally tend to "ground" by the shortest distance even when obliged, in order to do this, to jump a considerable "air-gap," in preference to taking a longer path over a much lower resistance. Such arresters, therefore, have been essentially nothing more than two points or sets of points; one being "grounded" and the other connected to one or both legs of the circuit to be protected.

An arrester of this kind, while often affording a release from the static charge, would also allow the dynamo current to follow upon the arc so produced, thus producing either short circuit or a dangerous "ground," and in both cases causing an interruption of the main working circuit. Hence, the more improved arresters of this type were so constructed as to break the dynamo arc as soon as possible. This is easily seen to be a remedy rather than a preventive.

Mr. Wurts perceived this fact and set himself to the problem of constructing an arrester in which the dynamo arc could not start, rather than one which would break the arc when started. As far as can be judged from recorded data he has succeeded in solving the problem in a very efficient manner, both for alternating and direct current.

The operative features of these arresters conform more closely to recognized laws than those of the devices previously known and used for the purpose. The instruments are cheaper to manufacture, and, as far as the Institute has been able to ascertain, are very effective in preventing damage, and they protect without causing cessation of operations.

In these respects the Institute believes these inventions to be important improvements, and therefore recommends the award of the John Scott Legacy Premium and Medal to their originator, Alexander Jay Wurts, of Pittsburg, Pa.

Adopted at the stated meeting of the Committee on Science and the Arts, held Wednesday, May 2, 1894. JOSEPH M. WILSON, President.

Countersigned by WM. H. WAHL, Secretary.

ARTHUR BEARDSLEY, Chairman of the Committee of Science and the Arts.

**PRICES ON THESE LIGHTNING ARRESTERS ARE AS FOLLOWS:**

***Double Pole Non-Arcing Metal Lightning Arresters,*** for ***line*** use on alternating current circuits only, $4.50. Discounts as follows: 1 to 10 arresters, 10 per cent.; 11 to 50 arresters, 25 per cent.; 51 or more arresters, 33⅓ per cent.

***Single Pole Non-Arcing Railway Lightning Arresters,*** for ***line*** use on all direct current circuits up to 600 volts, $4.50. Discounts same as above.

# The S. K. C. Two Phase Alternating Current System.

THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multi-phase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

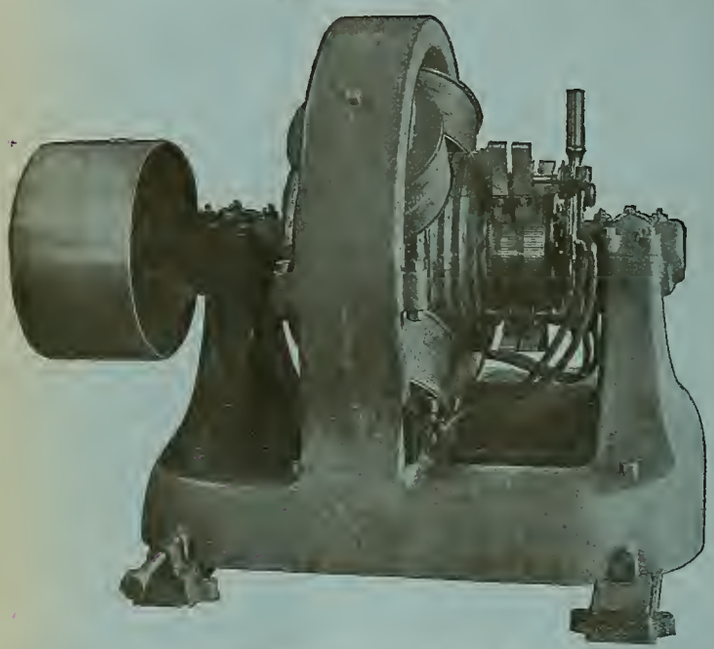
# MONOCYCLIC SYSTEM OF ELECTRICAL DISTRIBUTION.

A COMPLETE LIGHT AND POWER

## Central Station IN A Single Alternating Generator.



The Monocyclic Generator (150 K. W.)

The Induction Motor, 20 H. P.

**For Power Purposes equal to a Polyphase System, with all the Simplicity and Advantages of the Single Phase System.**

Generators will carry full load in lights or motors or any proportion in lights and the rest in motors.

**THERE CAN BE NO UNBALANCING.**

Induction Motors Operated with results equal to those obtained with the Best Direct Current Shunt Motors with the same Efficiency and better Speed Regulation.

*Arc and Incandescent Lighting Circuits Operated on the Single Phase System as from the Ordinary Alternator.*

MAY BE ADAPTED TO SYSTEMS OF SECONDARY MAINS SUPPLIED FROM LARGE TRANSFORMERS.

# GENERAL ELECTRIC COMPANY,

MAIN OFFICE, SCHENECTADY, N. Y.

# INCANDESCENT LAMPS.

WE MANUFACTURE THE "GLOBE." LIFE AND EFFICIENCY GUARANTEED.

New Process of Exhaustion by Mechanical Vacuum Pump. Absolutely Dry Vacuum. Samples and Prices Furnished on Application. Correspondence Solicited.

**GLOBE ELECTRIC LIGHT CO., 6 Clifton St., ROXBURY, MASS.**

AGENTS WANTED. WRITE US.

# The "Electra" Carbons.

IMPORTED

HIGH GRADE NUERNBERG CARBONS

ELECTRA ·TRADE MARK·

ELECTRA ·TRADE MARK·

FOR DIRECT CURRENT ARC LAMPS. FOR ALTERNATING CURRENT ARC LAMPS.

**Are the most economical and efficient manufactured. They produce a very brilliant and absolutely steady light, burning without any dust.**

**HUGO REISINGER,** NO. 38 BEAVER STREET, NEW YORK.
Sole Importer for the United States and Canada.

# BUCKEYE

QUALITY UNEQUALED.

FACTORY PRODUCTION TRIPLED.

INCANDESCENT LAMPS

Monadnock Building, Chicago. THE BUCKEYE ELECTRIC CO., Cleveland, O.

# STANDARD "WARD" ARC LAMPS,

**$10.00** EACH,

***Including Resistance, Clear Globes, and Tested Ready for Use.***

This price for 6½, 8 and 10 ampere lamps sold in pairs; single lamp with large resistance, globe, etc., $12.00.
In lots of 50 or more, as received from the manufacturer, without globes, resistance or testing,

**$7 50** EACH.

Knight Direct Current Lamps furnished complete with clear globes, resistance and testing,

**$9.00** EACH.

Knight Alternating Current Lamps, complete,

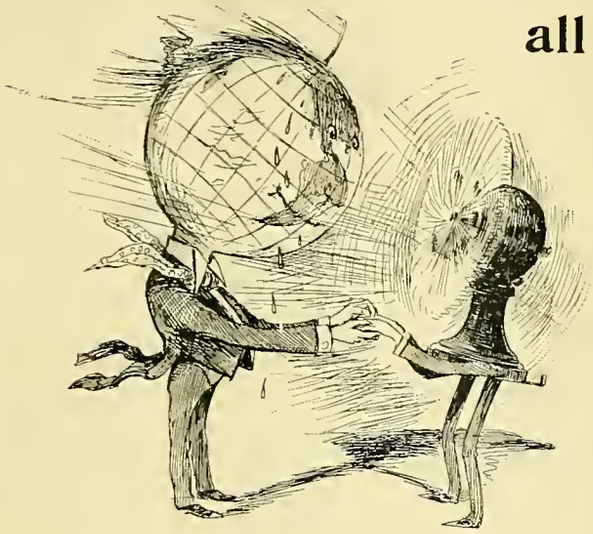
**$10.00** EACH.

Also Ward and Knight High Tension Lamps for Series Circuit; Railway Lamps; Twin Lamps; Focusing, Photo-Engraving and Stereopticon Lamps at Lowest Prices.

**CARBONS**—Lacombe, Hardtmuth, Siemens & Halske, National, Fidelity, Solar, Lancaster, Globe, at Lowest Prices.

ADDRESS

**CHAS. H. WATERMAN,** 1305 HAVEMEYER BUILDING, 26 CORTLANDT STREET, NEW YORK.



MOTHER EARTH (*in bicycle costume*)—"Goodness! Lundy, but we are all glad to see you, how did you come?"
THE FAN—"Oh I just sailed in—but you are looking worried."
M. E.—"I am, Son, I am; with a road race just off my hands and the wheat crop to manage, it's enough to worry anybody."
THE FAN—"Well, brace up! I'll help you out."

## all in the same boat—

everybody sweltering—everybody miserable, except the fellow who either has a **Lundell** Fan or is on the right side of July wheat; and the chances are that this happy one has a fan too—he needs a cool head.

**Hundreds in stock,** you can't send the telegrams in too swift—just give us the trade word and say how many, and you get them by next train.

**If you send a letter,** better include the other things you are needing—there's Okonite, no weather hot enough, or cold, or wet, or dry enough to hurt it. And Interior Conduit. And Pharos Lamps.

OKONITE IT NEVER DISAPPOINTS

# SAWYER-MAN INCANDESCENT LAMPS,

## With Bases to Fit Any Socket.

We have now resumed the manufacture of the well-known Sawyer-Man Lamps, on a scale to meet any possible demand.

We have adopted new methods of manufacture which add to the appearance and quality of our lamps, and make them by reason of their efficiency and long life, the cheapest and best lamps ever offered.

PRICES:

**PLAIN LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 25 cents each. |
| 20 and 25 candle power lamps | 30 " |
| 32 candle power lamps | 38 " |
| 16 candle power street car lamps | 25 " |
| 16 candle power street car lamps, anchored | 32 " |

**ORNAMENTAL LAMPS.**

| | |
|---|---|
| 8, 10 and 16 candle power lamps | 30 cents each. |
| 20 and 25 candle power lamps | 35 " |

Discounts according to quantity.
For etching the plain or ornamental lamps, 3½ cents each, net.

**COLORED LAMPS.**

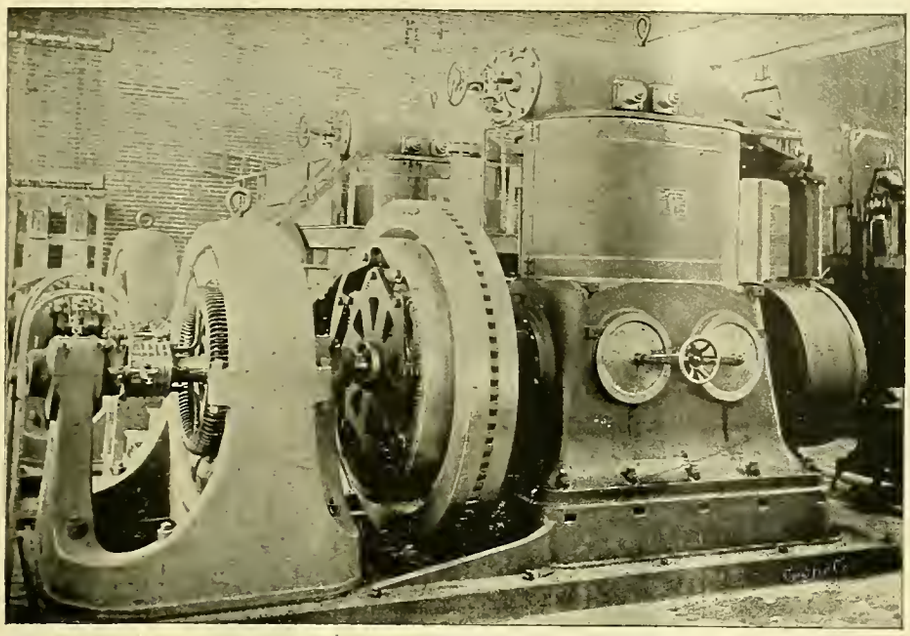
"Dipped" lamps in red, blue or green, 5 cents each, net, additional.

Boxing and packing at cost.
Prices are subject to change without notice.

# Westinghouse Electric & Manufacturing Company,

PITTSBURG, PA.

**Branch Offices in all Leading Cities.**



500 Horse-Power Polyphase Generators in power house of the Westinghouse Electric and Manufacturing Company, at East Pittsburg, Pa.

# Westinghouse Electric and Manufacturing Company,

## Sole Owners of the

# TESLA POLYPHASE SYSTEM.

The Ideal System for the distribution of power and light in factories and mills.

Motors, arc lights and incandescent lights supplied from the same circuits.

The system adopted by the Cataract Construction Company for their great plant at Niagara.

Especially adapted for transmission of power over long distances.

All machinery in our new works at East Pittsburg driven by Tesla Polyphase Motors, supplied from a central power plant. RESULTS: High Efficiency, Convenience, Economy and Flexibility. Inspection invited.

---

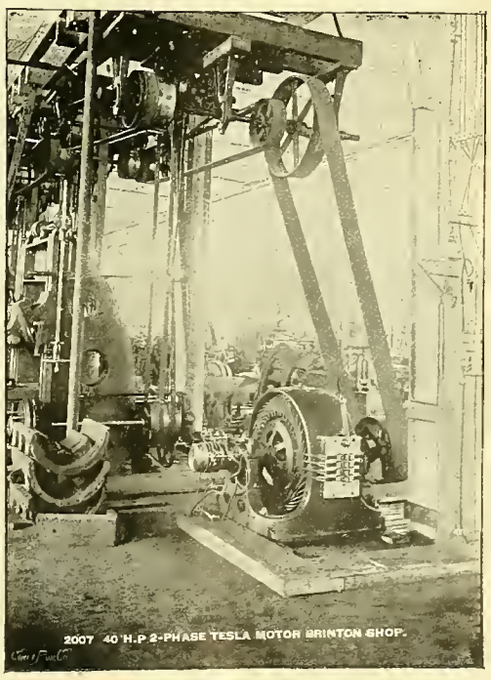
## NOTICE:

Induction motors operated by the so-called "Monocyclic" system offered for sale by the General Electric Company, are in fact multiphase motors and are broadly covered by the patents of Nikola Tesla owned by the Westinghouse Electric and Manufacturing Company.

The motors and system of distribution advertised by the Stanley Electric Company, of Pittsfield, are also an infringement of the Tesla Patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric and Manufacturing Company to bring suits against all users of apparatus infringing the Tesla patents, in order that the rights of the company may be enforced.



Forty Horse-Power Tesla Polyphase Motor operating machinery in shops at East Pittsburg.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators.
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.

## THE "CLARK" WIRE.

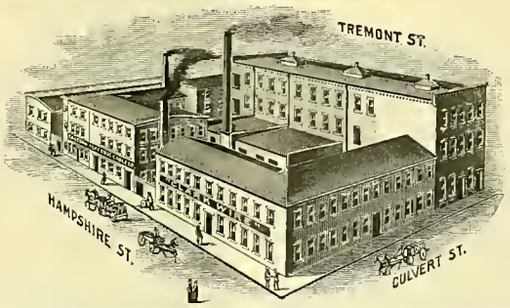
For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

**BRANCH OFFICE:**

**1649, 1650, 1651 MONADNOCK BLDG., CHICAGO, ILLINOIS.**

"CLARK WIRE" TRADE MARK.



**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

## REED'S IMPROVED PNEUMATIC CUSHION FOR TELEPHONE RECEIVERS.

*Recent discoveries have been made and applied* which entirely *overcome the two objections* to this useful and necessary article. The unpleasant suction, when pressed close against the ear, has been overcome by inserting a small tube in the inflated part of cushion, letting out the air from between the ear and receiver, but so small that no sound can enter.

The objection of having the ear removed so far from the diaphragm has been overcome by enlarging the hole, so that the cushion encloses the entire ear; making a complete sound-proof Booth.

***These Attachments are sent to responsible parties post paid on 48 hours trial, to be returned if not purchased, without any charge whatever.***

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month Secure class seats immediately.
Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

**NO FUSES BLOWN. NO INSPECTION NECESSARY.**
**NO FALLING OUT OF CIRCUIT BREAKERS.**
**NO ARCING AND NO REPAIRS.**

### Extract from report of The Franklin Institute on Wurts Lightning Arresters.

The various arresters produced by Mr. Wurts are intended for the protection of electric lighting and power circuits from direct and indirect damage from lightning discharges, and Mr. Wurts has, apparently, studied this question in a scientific and very exhaustive manner.

With but few exceptions all lightning arresters commonly used, up to the inventions of Mr. Wurts, have been based upon the fact that static discharges generally tend to "ground" by the shortest distance even when obliged, in order to do this, to jump a considerable "air-gap," in preference to taking a longer path over a much lower resistance. Such arresters, therefore, have been essentially nothing more than two points or sets of points; one being "grounded" and the other connected to one or both legs of the circuit to be protected.

An arrester of this kind, while often affording a release from the static charge, would also allow the dynamo current to follow upon the arc so produced, thus producing either short circuit or a dangerous "ground," and in both cases causing an interruption of the main working circuit. Hence, the more improved arresters of this type were so constructed as to break the dynamo arc as soon as possible. This is easily seen to be a remedy rather than a preventive.

Mr. Wurts perceived this fact and set himself to the problem of constructing an arrester in which the dynamo arc could not start, rather than one which would break the arc when started. As far as can be judged from recorded data he has succeeded in solving the problem in a very efficient manner, both for alternating and direct current.

The operative features of these arresters conform more closely to recognized laws than those of the devices previously known and used for the purpose. The instruments are cheaper to manufacture, and, as far as the Institute has been able to ascertain, are very effective in preventing damage, and they protect without causing cessation of operations.

In these respects the Institute believes these inventions to be important improvements, and therefore recommends the award of the John Scott Legacy Premium and Medal to their originator, Alexander Jay Wurts, of Pittsburg, Pa.

Adopted at the stated meeting of the Committee on Science and the Arts, held Wednesday, May 2, 1894. JOSEPH M. WILSON, President.

Countersigned by WM. H. WAHL, Secretary.

ARTHUR BEARDSLEY, Chairman of the Committee of Science and the Arts.

**PRICES ON THESE LIGHTNING ARRESTERS ARE AS FOLLOWS:**

***Double Pole Non-Arcing Metal Lightning Arresters,*** for ***line*** use on alternating current circuits only, $4.50. Discounts as follows: 1 to 10 arresters, 10 per cent.; 11 to 50 arresters, 25 per cent.; 51 or more arresters, 33⅓ per cent.

***Single Pole Non-Arcing Railway Lightning Arresters,*** for ***line*** use on all direct current circuits up to 600 volts, $4.50. Discounts same as above.

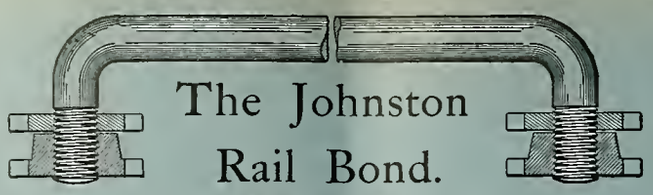
CATALOGUES ON APPLICATION

Send Business Card and mention WESTERN ELECTRICIAN.



# The Johnston Rail Bond.

(Patented July 17, 1894.)

For electrical contact both sides of the rail are used. The nuts have twelve times the cross-section of the copper conducting rod. Under the nuts the rail is smoothed and brightened by a special tool. The nuts are also, smooth and bright.

A firm mechanical, electrical and water-tight joint is made.

The usual length is 30 inches, of oo and oooo copper rod.

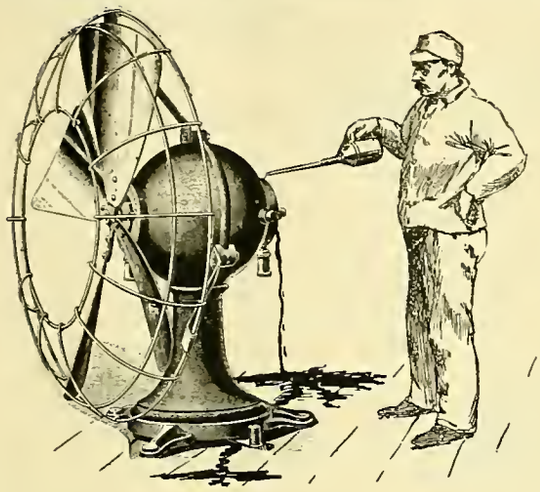
"KNIGHT" Lamps. Imported "NURNBERG" Carbons.

# R. B. COREY, GENERAL SALES AGENT,
Havemeyer Building, NEW YORK.



**You can't get this combination with a Lundell.** It isn't necessary. Put a few drops of good oil in the self-oiling bearings, to start with, and that lasts all season.

**No tinkering, no fretting** on the part of your customers. No frantic telephone calls to "hurry up and fix this dad-binged motor!"

**It's different with a Lundell,** the telephone bell just gives a musical tinkle, you go over and boldly answer "hello!" and this is what you hear--"*That you John? well, say, this fan you put in is a 'daisy'—wouldn't be without it—how much for another one?—and say, Jenkins, next door, is wild. I'm getting all his customers—said he didn't believe in these new-fangled things—I do—all right, put in the other one.*"

**And if you haven't an extra one**—telegraph—we send by next train.

**Wire, Molding, Cleats, Insulators, Interior Conduit, Cut-outs, Switches,** everything to make a complete and perfect job.

OKONITE IT NEVER DISAPPOINTS

# The S. K. C. Two Phase Alternating Current System.

**THE FIRST AND ONLY COMPLETE AND PERFECTED SYSTEM BY WHICH LIGHT AND POWER CAN BE SUPPLIED FROM THE SAME GENERATOR AND CIRCUITS. POWER TRANSMISSION AND DISTRIBUTION MADE PRACTICAL AND COMMERCIALLY SUCCESSFUL.**

## POINTS OF SUPERIORITY:

Our system is much more simple and consequently more durable than any other, either direct or alternating.

Our generator is much more efficient than any other alternator, requires less attention and absolutely no supplies except lubricant for bearings.

It is practically self-regulating without the loss of energy involved by compounding or compensating. Other multi-phase machines require a balance of load.

We have entirely eliminated from our generators the usual sources of trouble, expense and interruption of service: i. e., the revolving armature, commutator, collector rings, brushes, etc.

They can be built for any voltage from 110 for isolated lighting to the high voltages required for power transmission work; in latter case doing away with the expense and loss of step-up transformers; the usual central station machine can be connected at will for either 1,000 or 2,000 volts.

The motors excel in simplicity of construction; in starting torque and simplicity of starting device; in efficiency in the manner in which they take current in proportion to their load, and in uniformity of speed under different conditions of load.

Our transformers insure satisfactory service and the greatest economy. We are prepared to fill all orders promptly, and carry a full stock of transformers in Chicago.

**Patents**—Our apparatus is novel, different from anything heretofore made, and covered by patents that fully protect us and our customers. We are not infringing patents belonging to others, and shall avail ourselves of the patents under which we operate to protect ourselves from piracy by other manufacturers.

## TWO THINGS

.....to enthuse over: The healthy growth in commercial conditions, and the new Standard Arc Lamp. Doubt and despondency are are fast disappearing, followed by the cumbersome, expensive and defective arc lamps that have caused such depression in spirits and in the receipts of the owners. But now a little energy, a little enthusiasm, and an equipment of the new Standard Arc Lamps will accomplish all that is possible of accomplishment.

Perfect mechanically, efficient electrically, moderate in price, weatherproof.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or teats on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators,
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.

TRADE MARK.

**In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."**

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

**It is in one piece.**
**It has the strength.**
**It will lock the wire firmly.**
**It will NOT break in putting up.**
**It will NOT hold moisture.**
**It will NOT hurt the insulation.**

The wire can easily be put in place or removed without loosening the Cleat. It is a great saver in Time and Labor over any other Cleat in nse for putting up Electric Light or other Wires.

## The Nashold Cleat Company,

Telephone, Harrison 636. 934-935 Monadnock Bldg., CHICAGO, ILL.

## CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.

**A Central School of Shorthand and Typewriting of the most Modern and Complete Type.**

**A COMPLETE COURSE OF SHORTHAND.** We offer you shortband instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system, but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.

The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.

Tuition, $10.00 per month. Secure class seats immediately.

Evening classes, $5.00 per month. 98 per cent. of our students hold positions.

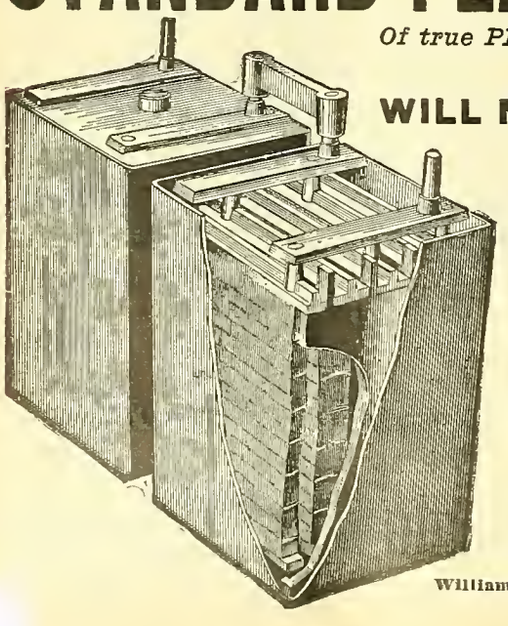
# STANDARD PLANTE STORAGE BATTERIES

*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.



**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

☞ **CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

# Dictionary of Electrical Words, Terms and Phrases.

**By EDWIN J. HOUSTON, A. M.**

**562 double-column Pages. 570 Illustrations. Cloth Binding. Type Pages 10 x 7 inches. Price, postage Prepaid, to any part of the world, $5.00.**

This Dictionary includes 5,000 **distinct Words, Terms and Phrases.** Each of the great classes or divisions of electrical investigation or utilization comes under careful and exhaustive treatment. For some reasons it deserves rather to be called an **Encyclopædia** than a dictionary.

**The Scheme of Treatment** is as follows:

1st. The words, terms and phrases are invariably followed by a **short, concise definition,** giving the sense in which they are correctly employed.

2d. A general statement then follows of the **Principles of Electrical Science** on which the definition is Founded.

3d. When, from the complexity of the apparatus, or from other considerations, it has been thought desirable to do so, an **Illustration or Diagram** of the apparatus is given.

4th. To facilitate study, an elaborate system of **Cross References** has been adopted, so that it is as **easy to find the definitions** as the words, and aliases are readily detected and traced.

In applying these rules great care has been exercised to secure **CLEARNESS,** to the end that while the definitions and explanations shall be SATISFACTORY TO THE EXPERT ELECTRICIAN, they shall also be SIMPLE AND INTELLIGIBLE to those who have had no training at all in electricity, or are novices in the art.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

**Test of a 45-inch Wheel—July 9, 1894.**

**NO FUSES BLOWN. NO INSPECTION NECESSARY.**
**NO FALLING OUT OF CIRCUIT BREAKERS.**
**NO ARCING AND NO REPAIRS.**

### Extract from report of The Franklin Institute on Wurts Lightning Arresters.

The various arresters produced by Mr. Wurts are intended for the protection of electric lighting and power circuits from direct and indirect damage from lightning discharges, and Mr. Wurts has, apparently, studied this question in a scientific and very exhaustive manner.

With but few exceptions all lightning arresters commonly used, up to the inventions of Mr. Wurts, have been based upon the fact that static discharges generally tend to "ground" by the shortest distance even when obliged, in order to do this, to jump a considerable "air-gap," in preference to taking a longer path over a much lower resistance. Such arresters, therefore, have been essentially nothing more than two points or sets of points; one being "grounded" and the other connected to one or both legs of the circuit to be protected.

An arrester of this kind, while often affording a release from the static charge, would also allow the dynamo current to follow upon the arc so produced, thus producing either short circuit or a dangerous "ground," and in both cases causing an interruption of the main working circuit. Hence, the more improved arresters of this type were so constructed as to break the dynamo arc as soon as possible. This is easily seen to be a remedy rather than a preventive.

Mr. Wurts perceived this fact and set himself to the problem of constructing an arrester in which the dynamo arc could not start, rather than one which would break the arc when started. As far as can be judged from recorded data he has succeeded in solving the problem in a very efficient manner, both for alternating and direct current.

The operative features of these arresters conform more closely to recognized laws than those of the devices previously known and used for the purpose. The instruments are cheaper to manufacture, and, as far as the Institute has been able to ascertain, are very effective in preventing damage, and they protect without causing cessation of operations.

In these respects the Institute believes these inventions to be important improvements, and therefore recommends the award of the John Scott Legacy Premium and Medal to their originator, Alexander Jay Wurts, of Pittsburg, Pa.

Adopted at the stated meeting of the Committee on Science and the Arts, held Wednesday, May 2, 1894. JOSEPH M. WILSON, President.
Countersigned by WM. H. WAHL, Secretary.
ARTHUR BEARDSLEY, Chairman of the Committee of Science and the Arts.

**PRICES ON THESE LIGHTNING ARRESTERS ARE AS FOLLOWS:**

***Double Pole Non-Arcing Metal Lightning Arresters,*** for ***line*** use on alternating current circuits only, $4.50. Discounts as follows: 1 to 10 arresters, 10 per cent.; 11 to 50 arresters, 25 per cent.; 51 or more arresters, 33⅓ per cent.

***Single Pole Non-Arcing Railway Lightning Arresters,*** for ***line*** use on all direct current circuits up to 600 volts, $4.50. Discounts same as above.

...LUNDELL...

For Direct or Alternating Currents.

in perfection of design
harmony of proportion
excellence of finish
meritorious work
noiseless action
current economy
anything

.....The proof—compare a LUNDELL with any other that you ever saw, and abide by your own judgment.

Central Electric Company,
173-175 Adams St.,
CHICAGO.

Branches { Kansas City, Mo. Gate City Electric Co. / St. Louis. Southern Electric Supply Co.

# Competition in Chicago

Has been unusually fierce on Fan Motors, and it is significant that there are about as many **Lundell Fans** doing service here as all others combined. Go to the Theatres, Restaurants, Offices, Clubs, Hotels and you will find a Lundell ahead of you fixing things up comfortably.

## It's the quality that tells.

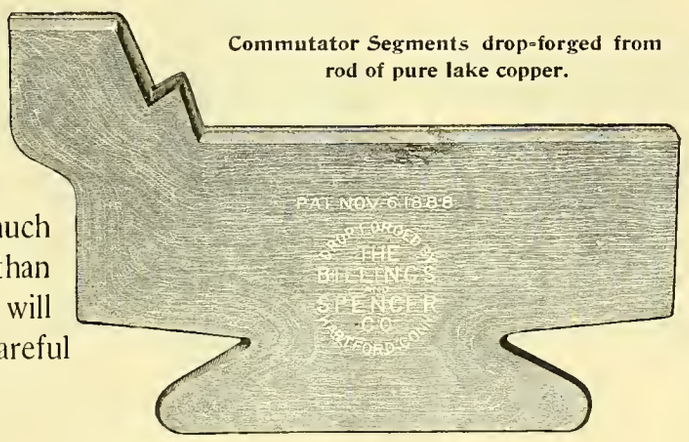
Customers have the opportunity of comparing all kinds. They buy the Lundell. You can sell them just as easy as we can. Have you tried it?

# In line with our aim

To offer only the highest grades of **Electric Street Railway** specialties, we have secured the General Western Agency for the Billings and Spencer Drop-Forged Trolley equipments and Commutator Segments. These several devices represent the best work that has been accomplished in overhead construction appliances.

## Western Buyers

Will be able to supply themselves from our Chicago Stock with much less expense and time than formerly. All orders will be given prompt and careful attention.



**Commutator Segments drop-forged from rod of pure lake copper.**

Railway Catalogue to any address.

### Some Anecdotes of Napoleon.

*Harper's Bazaar.*

In his busiest hours Napoleon Bonaparte was kind to children. At the battle of Austerlitz a little girl asked him for his autograph.

"Certainly, my child," said he. Then turning to one of his aides, he cried, "Stop the battle for ten minutes. I wish to write my name for this child."

"It will not take ten minutes, will it?" asked the child.

"Yes, quite;" returned Napoleon. "I've a much bigger name than I used to have."

At the battle of Waterloo, when the day was over, an aide riding hastily to the Emperor's side, cried out, breathlessly:

"Sire, the battle is lost."

"Good," returned the Emperor. "Let it stay lost. I don't want it any more."

Listening to a discussion among his officers as to the value of a name, Bonaparte once said, "It has much. Do you suppose that I could ever have become Emperor of France if my name had been Skaggs? No, no. The French will stand a great deal, but Emperor Skaggs would have aroused their deepest animosity."

### The Discouraged Farmer.

Atlanta *Constitution.*

In spite o' all the croakers say,
The land's still here for makin' hay;
(The only trouble is, I'm 'fraid,
We jest can't live untel it's made!)

In spite o' prophesyin' ill,
We've got the mule and mortgage still;
(The only thing that makes me sigh,
Won't have 'em when the crap's laid by!)

In spite o' weather cold an' rough
The trees will give us fruit enough:
(The only thing that makes me blue,
They'll levy on the fruit trees, too!)

In spite o' all the fret an' fuss,
The good Lord will take care o' us;
(The only question hoverin' nigh
Is—kin we live untel we die?)

### As to His Own Knowledge.

"Banks," said Rivers, "speaking about the finances, "isn't there what you call a 'better feeling' now?"

"No, Rivers," replied Banks, absent-mindedly exploring his vest pocket with his thumb and finger. "There is no improvement in the feeling."

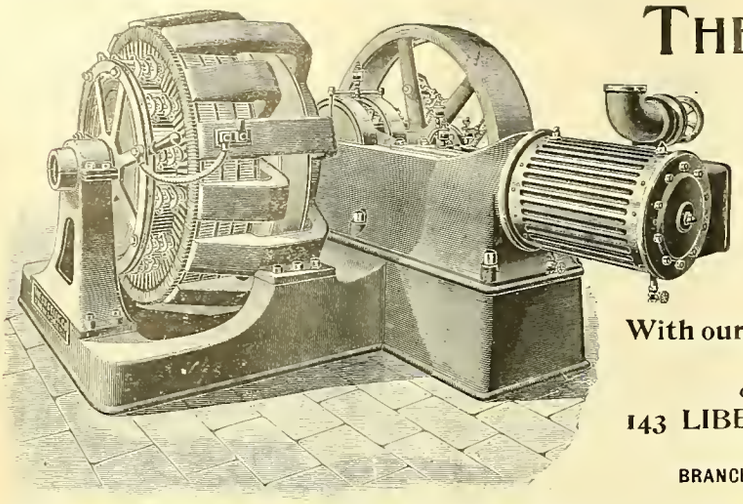
### A Fearful Leak.

The April fire loss in the United States was $11,018,150, which is $500,000 less than the loss in April, 1894, and a gain of more than $3,500,000 over the same month in 1893. But the loss for 1895 up to May 1 is $49,513,250, while last year, for the same time, the total was $42,553,100. At this rate the United States will lose in the next century by conflagrations over $11,000,000,000. It is a fearful leak, and very little is being done to prevent it. An exception to this may be stated in favor of electrical wire work. Leading electrical men seem to be keenly alive to the necessity of careful construction in order to minimize the risk of fire as a result of crossed or imperfectly insulated wires. Probably their greatest advance in this respect has been in the adoption of brass and iron armored interior conduit. Wired with this system a building is absolutely safe from danger of fire in this direction.

"Proverbs was largely the ruin of me," said Mr. Everett Wrest. "How?" asked the sympathetic citizen. "Take, for instance, that one about the race not bein' to the swift. I guess that there has made me lose more money on 40-to-1 shots than would burn a wet dog."—Cincinnati Tribune.

A bad break in a curate's sermon is reported in the Church Times. After appealing to the old with "And you old men with your hoary head," he turned to the young men with the appeal: "And you young men with your blooming cheek." He tried to change the phrase but it was too late.

"Wonderful, isn't it," began the Cheerful Liar, "what narrow escapes children run when they are too small to take care of themselves! I marvel sometimes that anybody ever lives to grow up." "Well, what now?" said the Man Who Was Being Bored, resignedly. "Oh, nothing much. My youngest child fell out of the second-story window this morning." "You don't say so? And the little creature was not hurt at all? Miraculous!" "Not so surprising. You see there was one of these patent lawn-sprinklers playing right under the window, and when the baby fell into the stream it tossed him back and kept him tumbling in the air till I rushed in and caught him. Got pretty wet, but there was no damage done. But," added the Cheerful Liar gloomily, "it proved an expensive accident, after all." "How was that?" "There was a water inspector passing at the time, and when he saw the affair he came in and fined me $10 for using so big a stream."



# THE C & C ELECTRIC CO.

WEBSTER

.....Defines "Standard" as "having a recognized and permanent value," as the Standard system of electric lighting. Something that other systems are measured by when they make the claim that they are just as efficient electrically, just as perfect mechanically, just as economical to operate. Experience is expensive but it teaches that there can only be one Standard—why not select that at a start?

No other electric lighting system so simple, so satisfactory for commercial or for street lighting. The *book* will be sent free to you.

## No. 11 DOUBLE GROOVE PONY INSULATOR.

**Can be Used for Transposing.**

The points or tests on the lower rim of the petticoat attracts the water on the outer surface of the insulator into drops. The water drops from these points on to the cross-arm, thereby preventing the moisture from creeping up on the inner petticoat, and thence to the pin. Owing to the great success of our Patent Teat Insulator in Telegraph Work, where the efficiency of the Insulator has proven to be more than twice that of the ordinary Insulator, we have concluded to apply the device to all Insulators for Telegraph, Telephone and Street Railway Work.

Standard Screw Glass Insulators,
Floor Insulators, Glass Break Knobs, Battery Jars, Arc Light Globes for all Systems.
Colored Glass Insulators to designate different currents.

**WORK ON SPECIAL DESIGNS A FEATURE.**
Send Model or Drawing and we will furnish estimates.

## PROPOSALS

FOR

### Municipal Electric Light Plant.

Sealed proposals will be received by the Mayor and City Council of the city of Harvard, Ill., until 12 o'clock of the 1st day of July, A. D., 1895, for the construction of a Municipal Electric Light Plant as per plans and specifications on file in the office of the City Clerk.

Proposals will be received for the work as a whole or any part thereof, but must be made strictly according to said plans and specifications or they will not be considered.

A certified check of $500, made payable to the city of Harvard, must accompany such bids as are made for the erection of the plant complete. No contractor, however, bidding on a portion of the work will be called upon to submit with his bid a check for over $250. The checks deposited by the unsuccessful bidders will be returned to them within 5 days from date of opening bids. The successful bidder or bidders shall be required to give an approved bond within ten (10) days after the acceptance of their bid or bids in the sum of twenty five hundred dollars for the faithful compliance with the conditions set forth in these specifications. All bids must be sealed and addressed to P. E. Saunders, City Clerk, and submitted on or before the first day of July, 1895

The right is reserved to reject any and all bids. Certified check or checks shall be forfeited if the successful bidder or bidders shall fail to deposit with the City Clerk within ten days after the acceptance of his proposition, the bond required under these specifications.

L. A. GARDNER, Mayor.
P. E. SAUNDERS, City Clerk.

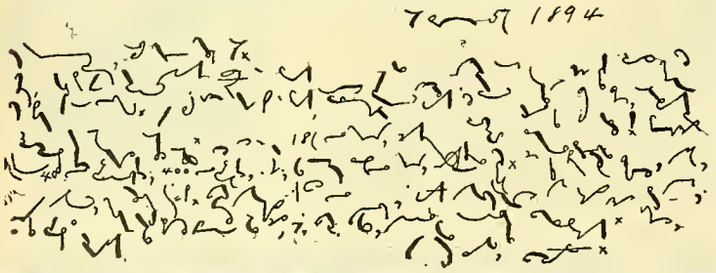
CHARLES A. BRAMHALL, Selling Agent, 39 Cortlandt Street, NEW YORK.

CHICAGO SHORTHAND INSTITUTE, 35th St. and Wabash Ave.
A Central School of Shorthand and Typewriting of the most Modern and Complete Type.

A COMPLETE COURSE OF SHORTHAND. We offer you shorthand instructions in abundance, and most excellent in quality. Our course is graded and arranged in logical order. We claim not a new system but a new method of imparting the art of shorthand by which we can equip any ordinary intelligent person for the execution of any stenographic work devolving upon the expert stenographer or court reporter.
The method of instruction employed is practical and progressive. The principles are taken up and explained in an orderly manner, and the student directed how to apply them correctly in the work of forming the characters rapidly and artistically. You may have access to the quintessence of the standard systems—Pitman, Munson, Graham. We guarantee to turn you out a full-fledged stenographer capable of any kind of stenographic work. The art is made a specialty.
Tuition, $10.00 per month. Secure class seats immediately.
Evening classes, $5.00 per month. 98 per cent. of our students hold positions.



The Electric Railway of To-Day.
By H. B. PRINDLE.
60 PAGES, PROFUSELY ILLUSTRATED.
PRICE 50 CENTS.

The author describes the ELECTRIC RAILWAY SYSTEM in a popular manner, using such language that the reader who is unfamiliar with technical terms can readily understand the construction of the apparatus and the functions of various appliances used in the electrical propulsion of street cars.

It contains a vast amount of useful and valuable information for every motorman and those interested generally in Electric Railway work and improvement.

PRICE 50 CENTS.

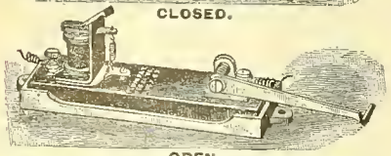
CLOSED.



OPEN.
Regular Size, 6 inches long, 2¾ inches high, 1 to 1¼ inches wide.
In a suit brought against F. Stevens by the Cutter Company, claiming an infringement on an Electric Flush Switch, it was decided in his favor by the United States Court in December last, the Court dismissing the case with costs.

THE ELECTRIC PROTECTION CO.,
1028 FILBERT STREET, PHILADELPHIA, PA.
Owners and Manufacturers of
THE PLUSH PROTECTORS,
THE STEVENS FLUSH SWITCHES,
And General Electrical Work.
Special attention given to the construction of models and inventors' experimental work.
WE CLAIM
For the Plush Protectors, simplicity, sure action, ready adjustment, and interchange of parts.
For the Stevens Flush Switch, fire and damp proof. Mechanism is simplicity itself. Nothing to get out of order. Make and break so wide that no arc can form. Wired without removing casing. Buttons made of mother of pearl. Base made of vulcabeston with porcelain cases.

Impossible for them to get out of order.

# DAYTON ELECTRIC CEILING FANS

For 110, 220, 260, 500 Volts D. C. and Arc Circuits.

Give absolute satisfaction.
They are a pronounced success in every detail.
If you want the best, send us your orders for

# THE DAYTON.

# OUR FAN MOTORS

For 500 Volt and Arc Circuits are Perfect.

We have a large stock on hand and can fill your orders without delay.

# ALTERNATING FAN MOTORS.

We have a limited stock of the Ries and Scott Fan Motors on hand. As we are making an exceptionally low price on them, they are going fast. If you are looking for a bargain in this line, we can accommodate you. Send us your orders at once if you wish to take advantage of low price.

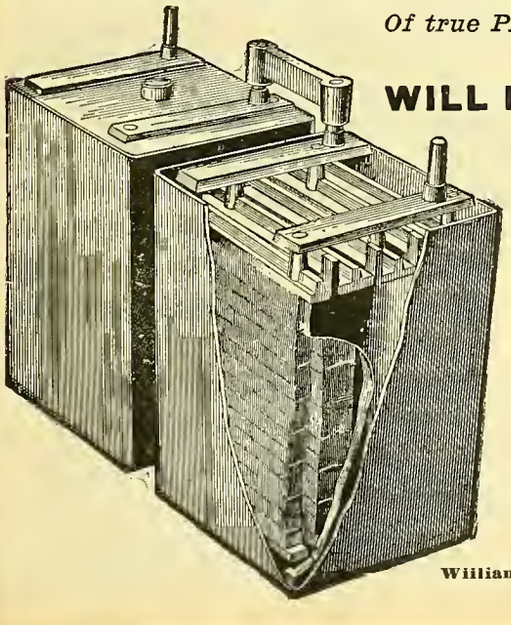
# STANDARD PLANTE STORAGE BATTERIES

*Of true PLANTE Type and CRYSTALLINE FORMATION.*

Will give or receive without injury, currents that would destroy other batteries.



## WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.

Contain no asbestos or other separating material to increase their internal resistance.

## ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

## Highest efficiency, largest delivery, lowest internal resistance.

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

## Cannot be damaged by excessive charge or discharge currents.

A 400 ampere current has been taken from a 120 ampere hour cell.

☞ CHALLENGE: We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

# ELECTRICITY FOR ENGINEERS.

New Edition, Just Out! Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

**PART I. CONTENTS.**—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current: Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Catch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial: Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator: Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII; Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of Use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Belt; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXIII: Electric Motors, General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

**PART II. CONTENTS.**—CHAPTER I: Alternate Current Dynamos; Principles of the Field. Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature, Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos, Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V; Transformers, Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument: Low Potential Voltmeter.—CHAPTER XIII: Voltmeters: Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulæ and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

## A NEW AND VALUABLE BOOK.

# ELECTRIC LIGHTING PLANTS,

## THEIR COST AND OPERATION.

**By W. J. BUCKLEY.**

Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

***With Numerous Illustrations, Diagrams, Plans, Tables, Etc. 275 Pages. Cloth. Price $2.00, Postage Free.***

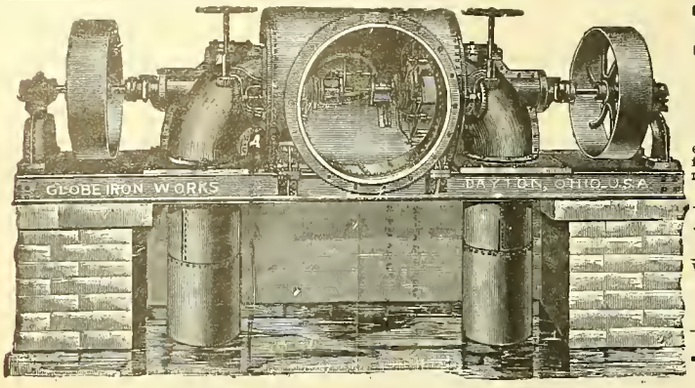
This work gives all necessary data for the erection of an electric light plant of any size.

**THE COST OF ARC LIGHTING.** **THE COST OF INCANDESCENT LIGHTING.**

**READ THE TABLE OF CONTENTS:**

Alternating Arc Lamps, Arc Plants, Belting, Boilers, Boiler Settings, Boiler Efficiencies, Books, Building, Cost of Arc Dynamos and Lamps, Cost of Arc Plants Erected, Cost of Alternating Dynamos, Cost of Alternating Plants Erected, Cost of Belts, Cost of Boilers, Cost of Brick Chimneys, Cost of Copper for Alternating Circuit, Cost of Corliss Engines, Cost of Compound Corliss Engines, Cost of Compound High Speed Engines, Cost of Condensers, Cost of Friction Clutch Pulleys, Cost of Heaters, Cost of High Speed Engines, Cost of Incandescent Dynamos, Cost of Idlers, Cost of Injectors, Cost of Meters, Cost of Motors, Cost of Operating Lamps per hour, Cost of Power Generators, Cost of Poles, Cost of Plain Pulleys, Cost of Pillow Blocks, Cost of Pumps, Cost of Shafting, Cost of Shaft Couplings, Cost of Stacks—iron, Cost of Stacks—brick, Cost of Steam, Cost of Transformers, Cost of Wire, Chimneys, Circuit Loss, Contract Blanks, Current Distribution, Circuits—overhead, Circular Mils of Wire, Depreciation, Direct Connected Apparatus; Dynamos, Dynamo Data, Economy of Condensing, Economy of Covering Steam Pipes, Economy of Heater, Efficiency of Engines, Engines, Equivalent of Current in Horse Power, Equivalent Rates of Lighting, Fuel, Horse Power of Belting, Horse Power of Motors, Horse Power of Shafting, Incandescent Arc Lamps, Instruments, Instructions for Employes, Insulation, Labor, Load Chart, Meter Connections, Municipal Ownership, Natural Gas, N. E. L. A. Standard Rules, Oil, Outcome of Practical Management, Pole Line, Pulleys, Rope Transmission, Resistance of Wire, Rules—Fire Underwriters, Report Com. on Data N. E. L. A., Reports of Cities Owning Plant, Reports of Cities Contracting, Stock Room, Shafting, Transformers, Transformer Curves, Wiring Tables—Primary Wiring, Wiring Tables—Secondary Wiring, Wiring Tables, Motor Wiring, Wire, Wire Formula, Water Power, Wood as Fuel.

**The Only Book of Its Kind in the English Language. Price, $2.00.**



# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |
|---|---|---|---|---|---|

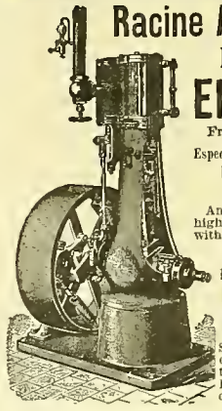
Is the title of a book of reference for all points between Chicago and Lake Superior on the line of the Milwaukee & Northern R. R., and is a valuable publication for business men and tourists who may be interested in the development of the agricultural, mineral and timber resources of Northern Wisconsin and the Upper Peninsula of Michigan. This book, together with an illustrated pamphlet telling "*Where the Trout Hide*" will be sent free upon application to Geo. H. Heafford, General Passenger Agent. "North Star Route," Chicago, Ill

## Racine Automatic HIGH SPEED ENGINES.



From 1 to 125 H. P.

Especially Adapted for **ELECTRIC LIGHTING,**

And all places where high speed in connection with economy is desired.

Over 2,500 in use.

Porcupine and Tabular **BOILERS.**

MARINE ENGINES AND OUTFITS.

Send for Catalogue describing our new 1 to 6 H. P. Automatic Engine and Boiler outfit.

## Racine Hardware Co.,

W. F. PARISH, Gen'l Sales Manager,
W, Marquette Building.
Works, Racine, Wis. CHICAGO, ILL., U. S. A.

## J. G. BRILL COMPANY, - - - PHILADELPHIA,

BUILDERS OF RAILWAY AND TRAMWAY CARS OF ALL CLASSES.

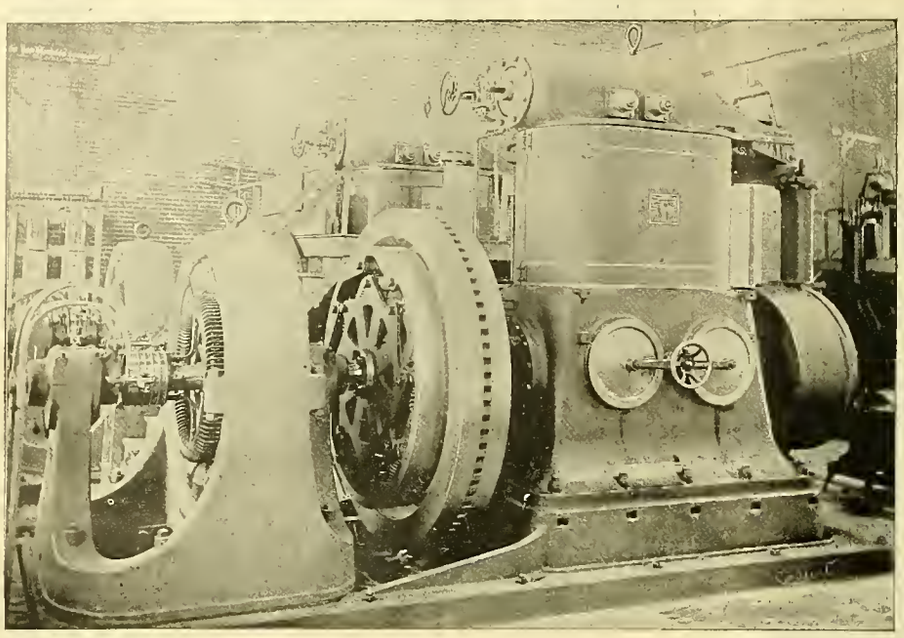
Special attention given to the building of Electric Motor and Trail Cars.
Riders of Brill No. 21 Truck with solid forged frame, and "Eureka" Maximum Traction Pivotal Truck.

All GENUINE INGOTS & MANUFACTURES BEAR OUR REG. TRADE MARKS.

# PHOSPHOR-BRONZE

INGOTS, CASTINGS, WIRE, SHEET &c.

THE PHOSPHOR BRONZE SMELTING CO. LIMITED
2200 WASHINGTON AVE. PHILADELPHIA, PA.
ORIGINAL MANUFACTURERS OF PHOSPHOR-BRONZE IN THE UNITED STATES AND SOLE MAKERS OF "ELEPHANT BRAND" PHOSPHOR-BRONZE.



500 Horse Power Polyphase Generators in power house of the Westinghouse Electric and Manufacturing Company, at East Pittsburg, Pa.

# Westinghouse Electric and Manufacturing Company,

## Sole Owners of the

# TESLA POLYPHASE SYSTEM.

The Ideal System for the distribution of power and light in factories and mills.

Motors, arc lights and incandescent lights supplied from the same circuits.

The system adopted by the Cataract Construction Company for their great plant at Niagara.

Especially adapted for transmission of power over long distances.

All machinery in our new works at East Pittsburg driven by Tesla Polyphase Motors, supplied from a central power plant. RESULTS: High Efficiency, Convenience, Economy and Flexibility. Inspection invited.

---

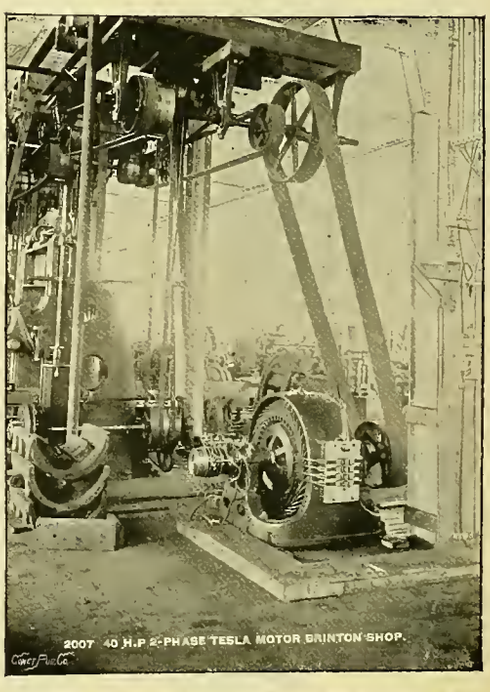
## NOTICE:

Induction motors operated by the so-called "Monocyclic" system offered for sale by the General Electric Company, are in fact multiphase motors and are broadly covered by the patents of Nikola Tesla owned by the Westinghouse Electric and Manufacturing Company.

The motors and system of distribution advertised by the Stanley Electric Company, of Pittsfield, are also an infringement of the Tesla Patents.

Suits have been brought against each of these companies, and are being pressed to a hearing as rapidly as possible.

It is the purpose of the Westinghouse Electric and Manufacturing Company to bring suits against all users of apparatus infringing the Tesla patents, in order that the rights of the company may be enforced.



Forty Horse Power Tesla Polyphase Motor operating machinery in shops at East Pittsburg.

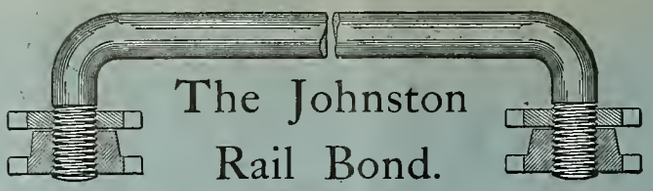
ELECTRICAL SUPPLIES

125 South 2d St. Philadelphia

CATALOGUES ON APPLICATION

Send Business Card and mention WESTERN ELECTRICIAN.



The Johnston Rail Bond.

(Patented July 17, 1894.)

For electrical contact both sides of the rail are used. The nuts have twelve times the cross-section of the copper conducting rod. Under the nuts the rail is smoothed and brightened by a special tool. The nuts are also, smooth and bright.

A firm mechanical, electrical and water-tight joint is made.

The usual length is 30 inches, of 00 and 0000 copper rod.

Address the manufacturers,

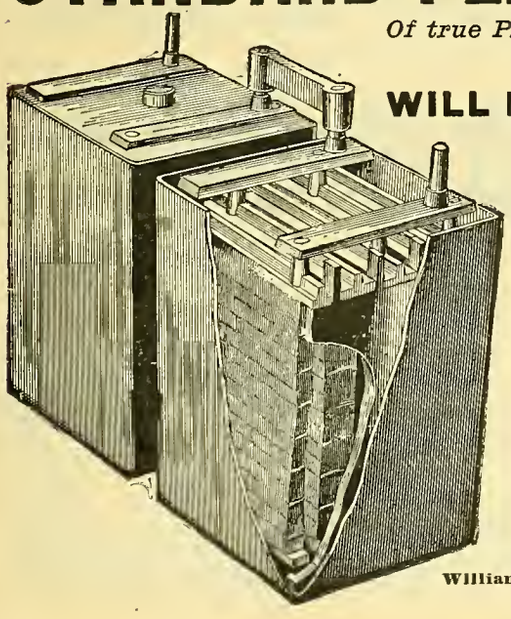
# STANDARD PLANTE STORAGE BATTERIES

*Of true PLANTE Type and CRYSTALLINE FORMATION.*



Will give or receive without injury, currents that would destroy other batteries.

**WILL NOT SULPHATE, DISINTEGRATE OR BUCKLE.**

Contain no asbestos or other separating material to increase their internal resistance.

**ESPECIALLY ADAPTED TO CENTRAL STATION AND POWER-HOUSE SERVICE.**

Absolutely free circulation of electrolyte preventing discharge of one plate into another.

**Highest efficiency, largest delivery, lowest internal resistance.**

For efficiency, reliability, durability, and capacity to receive and yield excessive currents, they are unequaled by any other battery on the market in this country.

**Cannot be damaged by excessive charge or discharge currents.**

A 400 ampere current has been taken from a 120 ampere hour cell.

☞ **CHALLENGE:** We will place an equal number of these cells in series-circuit with any other cells of like capacity, and submit them to charge and discharge currents as high as the circuit can give and receive; and we guarantee no distortion or deterioration of plate in our cells under currents that no other cell will withstand.

# ELECTRICITY FOR ENGINEERS.

New Edition, Just Out! Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

**PART I. CONTENTS.**—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator.—CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII; Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator.—CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of Use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Heli; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXIII: Electric Motors, General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

**PART II. CONTENTS.**—CHAPTER I: Alternate Current Dynamos; Principles of the Field. Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature, Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos, Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V; Transformers, Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

# Progress the Order of the Age.

## THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickmao, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |
|---|---|---|---|---|---|
| Whole Gate | 16.06 | 119.17 | 141.68 | 205.27 | 79 76 |
| ⅞ " | 16.42 | 122.00 | 127.18 | 196.19 | 82.68 |
| ¾ " | 16.78 | 117.33 | 112.60 | 175.74 | 82.18 |
| ⅝ " | 17.03 | 111.83 | 98.12 | 149.99 | 79.31 |
| ½ " | 16.88 | 118.67 | 82.07 | 118.40 | 76.62 |

Test of a 42-inch Wheel—July 14, 1894.

| | Head. | Rev. per Min. | Cu. Ft. per Sec. | Horse Power. | P'r Cent |
|---|---|---|---|---|---|
| Whole Gate | 16.33 | 128.00 | 134.18 | 199.56 | 80.60 |
| ⅞ " | 16.66 | 134.80 | 120.85 | 188.14 | 83.09 |
| ¾ " | 16.69 | 129.33 | 104.85 | 162.89 | 82.77 |

500 Horse Power Polyphase Generators in power house of the Westinghouse Electric and Manufacturing Company, at East Pittsburg, Pa.

# Westinghouse Electric and Manufacturing Company,

## Sole Owners of the

# TESLA POLYPHASE SYSTEM.

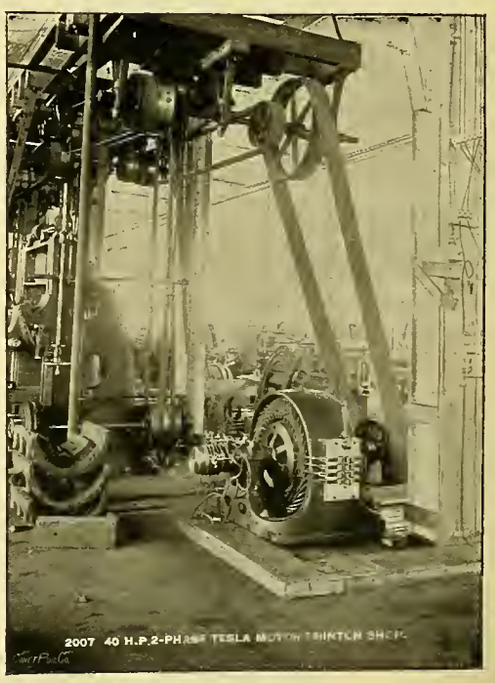
The ideal system for the distribution of power and light in factories and mills.
Motors, Arc Lights and Incandescent Lights supplied from the same circuits.
The system adopted by the Cataract Construction Company for their great plant at Niagara.
Adapted for transmission of power over long distances, also for local distribution of power.
Brushes and moving contacts may be dispensed with, rendering the system peculiary useful in mining operations.
All machinery in our new works at East Pittsburg driven by Tesla Polyphase Motors, supplied from a Central Power Plant.
RESULTS: High Efficiency, Convenience, Economy of Installation and Operation, and Flexibility.
Inspection invited.

---

Two suits are now pending against the Thomson-Houston Company under the Tesla Patents. Upon motion of the Westinghouse Company in the Circuit Court at New Haven recently, the Thomson-Houston Co. were limited to October 7th to take their testimony in defense. The suits will therefore be ready for argument in the near future.

The novelty of Mr. Tesla's invention was recognized by ***PROF. ELIHU THOMSON,*** who said in discussing the Tesla inventions before the American Institute of Electrical Engineers in 1888:

"I have certainly been very much interested in the description given by Mr. Tesla of his ***new and admirable*** little motor. I have, as probably you may be aware, worked in somewhat similar directions and towards the attainment of similar ends. The trials which I have made have been by the use of a ***single*** alternating current circuit, not a ***double*** alternating circuit."



Forty Horse Power Tesla Polyphase Motor operating machinery in shops at East Pittsburg.

ELECTRICAL STORAGE CELLS OF ANY DESIRED CAPACITY

# Dictionary of Electrical Words, Terms and Phrases.

**By EDWIN J. HOUSTON, A. M.**

**562 double-column Pages. 570 Illustrations. Cloth Binding. Type Pages 10 x 7 inches. Price, postage Prepaid, to any part of the world, $5.00.**

This Dictionary includes 5,000 **distinct Words, Terms and Phrases.** Each of the great classes or divisions of electrical investigation or utilization comes under careful and exhaustive treatment. For some reasons it deserves rather to be called an **Encyclopædia** than a dictionary.

**The Scheme of Treatment** is as follows:

1st. The words, terms and phrases are invariably followed by a **short, concise definition,** giving the sense in which they are correctly employed.

2d. A general statement then follows of the **Principles of Electrical Science** on which the definition is Founded.

3d. When, from the complexity of the apparatus, or from other considerations, it has been thought desirable to do so, an **Illustration or Diagram** of the apparatus is given.

4th. To facilitate study, an elaborate system of **Cross References** has been adopted, so that it is as **easy to find the definitions** as the words, and aliases are readily detected and traced.

In applying these rules great care has been exercised to secure **CLEARNESS,** to the end that while the definitions and explanations shall be SATISFACTORY TO THE EXPERT ELECTRICIAN, they shall also be SIMPLE AND INTELLIGIBLE to those who have had no training at all in electricity, or are novices in the art.
